INTRODUCTION

This volume presents information formerly published (until 1935) in the statistical section of the Yearbook of Agriculture. It brings together what seem from experience to be the most important agricultural statistics of the United States and of the world so far as the agriculture of this country is concerned. Those who need data for years earlier than are here shown may refer to the Yearbook of Agriculture prior to 1936 and to Agricultural Statistics, 1936. Current statistics comparable with those here presented can be obtained from periodicals published by the Department. When the word "Yearbook" alone appears in this volume, it refers to the Yearbook of Agriculture, published by this Department.

ACREAGE, YIELD, AND PRODUCTION ESTIMATES

The Bureau of Agricultural Economics, through its crop and livestock reporting service, estimates acreage of crops, numbers of livestock, and production, farm utilization, prices paid to farmers, farm income from and farm value of crops, livestock, and livestock products.

Acreages for the census years (1909, 1919, 1924, 1929 and 1934) are based largely on the census. Estimates of acreages in recent intercensal years have been based on the year-to-year changes shown by approximately 160,000 records which rural mail carriers secure each year from individual farmers, supplemented in each State by such other indications of acreage or production as are locally available, including State enumerations, local surveys, frontage measurements, carlot shipments, elevator and warehouse receipts, cotton ginnings, tobacco sales, sugar-beet purchases, and acreages of special crops contracted by processing companies.

Yields per acre are estimates based on reports of one or more farmers in each agricultural township on the average yield per acre in their localities. For all crops except cotton and a few minor crops, yields from 1919 to 1936 have been adjusted to be comparable with the

census yields of 1919, 1924, 1929, and 1934. For cotton acreage, yield, and production have been revised in consideration of census data and other statistical data developed from the agricultural adjustment programs. The production agrees with census ginning enumerations, with some adjustments between States where cotton grown in one State was ginned in another. Linters are not included in cotton figures, unless so stated in the respective tables.

In this volume, historical revisions prior to 1919 are shown for rice, wheat, rye, corn, oats, barley, buckwheat, flaxseed, cotton, tobacco, potatoes, and sweetpotatoes, by which the currently published estimates have been made consistent with the decennial census figures, supplemented by State enumerations. For other important crops, revised data will be published in future issues.

Estimates of farm stocks, farm sales, utilization, crop condition, and miscellaneous information concerning crops are based either upon sample data or upon estimates of crop reporters for their localities.

COMMERCIAL CROPS

The term "commercial" is used in connection with certain crop estimates to distinguish some part of the total production of a crop. Except for indicating that the entire production is not represented in the estimate, "commercial" does not have the same meaning in each instance where used. The commercial apple-crop estimate, for example, represents that portion of the total apple crop which is sold or available for sale for consumption as fresh fruit. That portion of the crop which is used for cider, vinegar, canning, evaporating, or other manufacture is not included in the commercial crop as defined in this case.

Estimates of commercial truck-crop production are concerned only with those areas growing crops primarily to supply the large consuming markets more or less distant from the producing center. Production in home and market gardens, intended primarily for local sale, is excluded. Similarly with truck crops grown for commercial canning or manufacture, the estimates include only quantities grown for use by canning or packing establishments and exclude quantities canned in the home. For the commercial acreages in the areas concerned, the truck-crop estimates are intended to include the total production suitable for food marketing purposes (unless destroyed by natural cause before harvest), whether or not the entire crop finds a market or use. It is, therefore, customary practice to retain in these production estimates those quantities of produce which ordinarily would be marketable, but which are left unharvested because of adverse marketing conditions. The canning-crop estimates represent the total quantity of raw product used by packers or canners for manufacturing purposes, including cold-packing.

PRICES RECEIVED BY FARMERS

Monthly prices received by farmers are based on reports from special price reporters, who are mostly country buyers of or dealers in agricultural products. These are prices paid to farmers for all grades and qualities of a specific commodity. Most of these prices relate to the 15th of the month, and for current information and the preparation of index numbers the State averages are weighted by State production to secure a United States weighted average for the

date. The seasonal (weighted) prices represent the State prices weighted by estimated sales during the marketing season. Farm values are computed mostly by applying the seasonal State price to the State production.

For commercial truck crops and canning crops, and for certain fruit crops, the prices shown are the estimated season averages of the prices received by farmers at the shipping point, including the cost of the container where this is a customary requirement of delivery. The December 1 price has been employed in computing farm values only in the case of certain miscellaneous crops of minor importance, where neither weighted averages of monthly prices nor estimates of average prices for the entire marketing season are available. These prices as of December 1 are obtained from an inquiry sent to farmers, on the regular December crop-schedule, and are weighted by crop-reporting districts in each State.

The index numbers of prices received by farmers (farm prices) are, for the most part, based on mid-month prices of fixed quantities of farm products and are expressed as a percentage of the August 1909-July 1914 average. The ratio of these index numbers of prices received to the companion index numbers of prices paid by farmers indicates the changes in the exchange value, or purchasing power, per unit of farm products.

LIVESTOCK ON FARMS

Numbers of livestock on farms on January 1, 1920, 1925, and 1935, are based on the census enumerations as of those dates, supplemented by enumerations by State agencies, such as assessors' and brand-inspection boards, and by records of shipments. Numbers on January 1, 1930, give weight insofar as feasible to the numbers reported by the census of 1930 which was as of April 1, with allowance for indicated changes between January 1 and April 1. In the intercensal years the numbers of livestock are estimated by methods similar to those used for crop acreages.

The average value per head on January 1 is estimated from reports of correspondents relating to livestock in their vicinity. These tend to reflect inventory values as distinguished from the monthly prices which relate to sales. The farm value on January 1 is computed by applying the average value per head to the number on farms. Estimates of production and farm utilization of livestock products are based upon sample data supplemented by check data of shipments, receipts, manufactures, and other similar data.

MARKET SUPPLIES AND PRICES

The market news service of the Bureau of Agricultural Economics supplies much of the information on market prices and movements. The leased-wire telegraph system in use by this service extends from the Atlantic to the Pacific Ocean and reaches most of the important markets. At each of the branch offices commodity specialists gather information regarding supply, market demand, and prices of the products on which they report. They observe sales actually made on the markets and are constantly in touch with the traders, who in many instances give them access to their office records in order that they may have specific information on which to base their reports.

Carlot shipments and market receipts of crops and livestock products are reported by officials and agents of railroads, express companies,

and boat lines, or are compiled from trade publications. Shipments to market by motortruck have continued important, and at a few of the markets receipts by truck are reported by dealers and distributors. Data on receipts, slaughter, and shipments of livestock are obtained from monthly reports submitted by the public stockyards. Data on cold-storage stocks are obtained directly from all important cold-storage warehouses, and data on commercial stocks of grain are reported by boards of trade, etc. Leaf-tobacco stocks are reported directly by dealers and manufacturers. Reports on the grade and staple of cotton ginned in the principal cotton-producing States are based on samples currently obtained from a substantial number of representative gins, a sample from every bale. Annually the grade and staple of the cotton on hand August 1 is reported.

Where a weighting factor is available, market prices as shown are weighted averages. But in many cases a weighting factor is not available, and the prices shown are usually the means of ranges of quotations without reference to quantity.

Prices derived from different sources may not be strictly comparable, although for most purposes they are satisfactory. Data as to commercial stocks and movements of various commodities are as nearly complete as practicable and are considered fairly representative.

IMPORTS AND EXPORTS

The tables of international trade cover substantially the international trade of the world in agricultural products. The total imports and total exports in any one year cannot be expected to balance, although disagreements tend to be compensated over a series of years. Among the sources of disagreement are: The different periods covered by the year of various countries; imports received in the year subsequent to the year of export; lack of uniformity in classification of goods as among countries; different trade practices and varying degrees of failure in recording countries of origin and ultimate destinations; different practices in recording reexported goods, and different methods of treating free ports. In the international trade tables the exports given are domestic exports and, therefore, include exports of commodities which are the growth, produce, or manufacture of the specified country, as well as exports of commodities of foreign origin which have been changed from the form in which they were imported or enhanced in value by further manufacture after importation. In the case of foreign countries the imports given are "special" or net imports, rather than general imports, whenever it is possible to distinguish such imports from general imports. General imports are all the imports reported, whereas "special" or net imports are general imports less reexports of merchandise previously imported and not changed from the condition in which imported. "Special" or net imports are used in the international trade tables for the following countries: Belgium, Denmark, Egypt, Irish Free State, China, Netherland India, France, and the United Kingdom.

In both the United States trade tables and the international trade tables, the United States trade figures are domestic exports as defined above and, until January 1934, general imports, unless otherwise specified. Beginning with January 1934 imports for consumption are given. General imports include all commodities entered for immediate consumption plus those entered for storage in bonded customs warehouses. Imports for consumption include all commodities entered

for immediate consumption upon arrival, plus withdrawals for consumption from bonded customs warehouses. For any given period general imports will differ from imports for consumption to the extent that entries for bonded customs warehouses during the period differ from withdrawals from such warehouses for consumption. This difference will be equal to the increase or decrease of stocks at the end, compared with stocks at the beginning of the period, in bonded customs warehouses, plus exports of foreign merchandise (reexports) from bonded customs warehouses during the period. While there are some inevitable omissions, there may be some duplications because of reshippments which do not appear as such in the official reports. Export and import statistics of the United States include trade with the Philippine Islands, which are treated as a foreign country. They also include any trade between foreign countries and Alaska, Hawaii, and Puerto Rico, but do not include shipments between continental United States and these possessions. Prior to January 1, 1935, the Virgin Islands of the United States were considered a foreign country (the same as the Philippine Islands), but since that date the Virgin Islands are treated in the same manner as Alaska, Hawaii, and Puerto Rico.

OTHER STATISTICS

Statistics of acreage and production in foreign countries are compiled as far as possible from official sources and are, therefore, subject to whatever errors may result from shortcomings in the reporting and statistical services of the various countries. Inaccuracies also result from differences in nomenclature and classification in foreign countries. Except where otherwise stated, pre-war data refer to pre-war boundaries. Yields per acre are calculated from acreage and production, both rounded to thousand units, and are therefore subject to a greater possibility of error when calculated for countries with small acreage.

Agricultural Adjustment Administration work began about the middle of 1933. This publication contains two summary tables, indicating in a general way some of the results of that work. Work of the Soil Conservation Service began in the early part of 1936, and this publication includes three summary tables relating to that subject. These five tables comprise the last pages in the section on Farm Business and Related Statistics.

Prices are stated in terms of United States currency, unless otherwise specified. For the convenience of those wishing to convert currency prices to gold prices a table of the gold value of the dollar, weekly from April 1933 to March 1937, will be found as the last table.

WEIGHTS AND MEASURES

The following table of weights, measures, and conversion factors covers the most important agricultural products, or the products for which such information is most frequently asked in the Department of Agriculture. It does not claim to cover all farm products nor all containers for any one product.

The figures were assembled from various sources within the Department and from State schedules of legal weights. Effort was made to select the most representative and fairest average for each product, particularly for fresh fruits and vegetables which show a wide variation in weight, due to differences in variety or size of the commodity and to condition and tightness of pack, etc. For such commodities as

develop considerable shrinkage, the point-of-origin weight or harvest-weight was used.

The approximate or average weights, as given in this table, do not (necessarily) have official standing as a basis for packing or as grounds for settling disputes. Not all of them are recognized as legal weights. The table was prepared chiefly for use of workers in the Department of Agriculture, who have need of conversion factors in statistical computations. The figures are subject to revision.

¹ Standard bushel used in the United States contains 2,150.42 cubic inches; the gallon, 231 cubic inches.

² Crates 4¼ by 16 by 16¼ inches.

³ This is the weight commonly used in trade practice, the actual weight varying according to temperature conditions.

⁴ The standard weight of 70 pounds is usually recognized as being about 2 measured bushels of corn, husked, on the ear, because it requires 70 pounds to yield 1 bushel, or 56 pounds, of shelled corn.

⁵ For statistical purposes the bale of cotton is 500 pounds gross or 478 pounds net weight. Actual bale weights vary from year to year, and the customary average weights of bales of foreign growth differ from that of the American square bale.

⁶ Average weight of cottonseed, although the legal weight in some States varies from this figure of 32 pounds.

⁷ This average of 55 pounds indicates the usual weight of sweetpotatoes when harvested. Much weight is lost in curing or drying, and the net weight when sold in terminal markets may be far below 55 pounds.

(See other conversion factors on next page.)

OTHER CONVERSION FACTORS

Commodity	Unit	Approximate equivalent
Apples.....	1 pound dried.....	7 pounds fresh.
Do.....	1 pound chops.....	5 pounds fresh.
Do.....	1 barrel.....	3 boxes or 3 bushel baskets.
Apricots.....	1 pound dried.....	5½ pounds fresh.
Barley flour.....	1 barrel (196 pounds).....	9 bushels barley.
Beans, lima.....	1 pound shelled.....	2 pounds unshelled.
Buckwheat flour.....	1 barrel (196 pounds).....	7 bushels buckwheat.
Cane sirup.....	1 gallon.....	5 pounds sugar.
Cherries.....	1 pound dried.....	4 pounds fresh in California; 5 pounds fresh elsewhere.
Corn, shelled.....	1 bushel (56 pounds).....	2 bushels (70 pounds) of husked ear corn.
Corn meal:		
Degermed.....	1 barrel (196 pounds).....	6 bushels corn.
Nondegermed.....	do.....	4 bushels corn.
Cotton.....	1 pound ginned.....	2.86 pounds unginned.
Dairy products:		
Butter.....	1 pound.....	21 pounds milk.
Cheese.....	do.....	10 pounds milk.
Condensed milk, whole.....	do.....	2.2 pounds milk.
Evaporated milk, whole.....	do.....	Do.
Ice cream ⁸	1 gallon.....	15 pounds milk.
Ice cream ⁸ (eliminating fat from butter and concentrated milk).....	do.....	12 pounds milk.
Malted milk.....	1 pound.....	2.6 pounds milk.
Powdered milk.....	do.....	8 pounds milk.
Powdered cream.....	do.....	19 pounds milk.
Dates.....	1 pound dried.....	1.33 pounds fresh.
Eggs.....	1 case (45 pounds).....	35.3 pounds frozen or liquid eggs.
Figs.....	1 pound dried.....	3 pounds fresh in California; 4 pounds fresh elsewhere.
Grapefruit, Florida.....	1 case canned.....	Slightly less than 1 box fresh fruit.
Flaxseed.....	1 bushel.....	Yields about 2½ gallons oil.
Linseed oil.....	1 gallon.....	From 0.4 bushel flaxseed.
Malt.....	1.1 bushels.....	1 bushel barley.
Maple sirup.....	1 gallon.....	8 pounds sugar.
Nuts:		
Almonds.....	1 pound shelled.....	3½ pounds unshelled.
Brazil.....	do.....	2 pounds unshelled.
Cashews.....	do.....	4.55 pounds unshelled.
Chestnuts.....	do.....	1.19 pounds unshelled.
Filberts.....	do.....	2.22 pounds unshelled.
Pecans:		
Seedling.....	do.....	2.63 pounds unshelled.
Improved.....	do.....	2.38 pounds unshelled.
Pignolias.....	do.....	1.30 pounds unshelled.
Pistachios.....	do.....	2 pounds unshelled.
Walnuts:		
Black.....	do.....	8½ pounds unshelled.
Persian (English).....	do.....	2.38 pounds unshelled.
Oatmeal.....	1 barrel (196 pounds).....	109½ bushels oats.
Peaches, California.....	1 pound dried.....	5½ pounds fresh.
Peanuts.....	1 pound shelled.....	1½ pounds unshelled.
Pears.....	1 pound dried.....	5½ pounds fresh.
Peas, green.....	1 pound shelled.....	2.5 pounds unshelled.
Prunes.....	1 pound dried.....	2½ pounds fresh in California; 3 to 4 pounds fresh elsewhere.
Raisins.....	1 pound.....	4 pounds fresh grapes.
Rice.....	1 pound milled.....	1.62 pounds rough or unhulled rice.
Rye flour.....	1 barrel (196 pounds).....	6 bushels rye.
Sugar.....	1 ton raw.....	Hawaii, 0.9617 ton refined; Puerto Rico and Philippines, 0.946 ton refined; Cuba and other sections, 0.9418 ton refined, beginning with the 1931-32 season.
Tobacco.....	1 pound stemmed.....	1.33 pounds unstemmed.
Wheat flour.....	1 barrel (196 pounds).....	4.7 bushels wheat. ⁹
Wool.....	1 pound scoured.....	2 pounds grease.
Do.....	1 pound pulled.....	1½ pounds grease.

⁸ The milk equivalent of ice cream per gallon is 15 pounds. Reports from plants indicate 81.24 percent of the butterfat in ice cream is from milk and cream, the remainder being from butter and concentrated milk. Thus the milk equivalent of the milk and cream in ice cream is about 12.

⁹ This figure (4.7) has been used for conversions relating to the period 1921-36. Because of changes in milling processes, the following factors have been used for earlier periods: 1790-1879, 5 bushels; 1880-1908, 4.75 bushels; 1909-17, 4.7 bushels; 1918 and 1919, 4.6 bushels; 1920, 4.6 bushels.

STATISTICS OF GRAINS

TABLE 1.—Wheat: Acreage, production, value, and foreign trade, United States, 1866-1936

Year	Acreage harvested	Average yield per acre	Production	Season average price per bushel received by farmers ¹	Farm value	Price per bushel at—		Foreign trade, including flour, year beginning July ⁴				Net exports ⁷

¹ Prior to 1908 prices are as of Dec. 1.² 1866-67 to 1898-99, Spring wheat, quoted as follows: 1866-67 to 1884-85, No. 2 Spring—simple average of mean of weekly high and low cash prices, as quoted in annual reports of the Chicago Board of Trade; 1885-86 to December 1896, No. 2 Spring—simple average of mean of daily high and low cash prices, as quoted in Howard, Bartel & Co. Red Book (summary of current quotations in Chicago Daily Trade Bulletin); January 1897-June 1898, No. 3 Spring and 1898-99, No. 1 Spring—simple average of mean of daily high and low cash prices as quoted in Chicago Daily Trade Bulletin; 1899-1900 to date, No. 2, Hard Winter computed by weighting selling prices by number of carlots sold, as reported in the Chicago Daily Trade Bulletin.³ 1899-1900 to 1917-18, No. 1 Northern Spring and 1918-19 to date No. 1 Dark Northern Spring, computed by weighting selling prices by number of carlots sold as reported in the Minneapolis Daily Market Record.⁴ Compiled from Commerce and Navigation of the United States, 1866-1917; Foreign Commerce and Navigation of the United States, 1918; Monthly Summary of Foreign Commerce of the United States, June issues, 1919-26, January and June issues, 1927-36. Wheat flour converted to terms of grain on the following basis: 1866-79, 5; 1880-1908, 4.75; 1909-17, 4.7; 1918 and 1919, 4.5; 1920, 4.6; 1921-36, 4.7 bushels of grain per barrel of flour.⁵ Includes flour milled from imported wheat.⁶ Includes wheat imported for milling in bond and export.⁷ Total exports (domestic plus foreign) minus total imports; beginning 1933 net figures are domestic exports minus imports for consumption.⁸ Net imports; i. e., imports for consumption minus domestic exports.⁹ Preliminary.

Bureau of Agricultural Economics. Italic figures are census returns.

¹ Preliminary.

² Excludes the Saar, since production for this territory was not included prior to 1935.

³ Official estimates. Figures are probably not strictly comparable with those for previous years.

Bureau of Agricultural Economics. Compiled from official sources and International Institute of Agriculture.

Both acreage and production figures refer to the year of harvest. Harvests of the Northern Hemisphere countries are combined with those of the Southern Hemisphere which immediately follow; thus, for 1936-37 the crop harvested in the Northern Hemisphere countries in 1936 is combined with the Southern Hemisphere harvest which begins late in 1936 and ends early in 1937.

¹ Includes all Russian territory reporting for years named.² Total Russian Empire exclusive of the 10 Vistula Provinces of Russian Poland and the Province of Batum in Transcaucasia.³ Exclusive of Russian Poland, Lithuania, parts of present Latvia and Ukraine, and 2 Provinces of Transcaucasia.⁴ Beginning with this date estimated production is within present boundaries of the Union of Soviet Socialist Republics, excluding Turkestan, Transcaucasia, and the Far East, which regions in 1924 produced 51,706,000 bushels and, in 1925, 58,000,000 bushels.⁵ Beginning with this date production is within post-war boundaries and therefore not comparable with earlier years.⁶ Official estimates. Figures are probably not strictly comparable with those for previous years.⁷ Preliminary.

Bureau of Agricultural Economics.

Production figures refer to the year of harvest. Harvests of the Northern Hemisphere countries are combined with those of the Southern Hemisphere which immediately follow; thus, for 1935-36 the crop harvested in the Northern Hemisphere countries in 1935 is combined with the Southern Hemisphere harvest which begins late in 1935 and ends early in 1936.

¹ Computed from total exports by customs districts on the basis of inspections of wheat for export by ports and classes in the United States and Canadian eastern grain division.

² Less than 600 bushels.

Bureau of Agricultural Economics.

Estimated production by classes based on questionnaire surveys of local authorities, supplemented by judgment of cereal specialists. Inspection of United States wheat for export data furnished monthly by Federal grain supervision officers at the export markets. Inspections are made at the ports of export. Export figures from reports of the Bureau of Foreign and Domestic Commerce.

¹ Preliminary.² Includes flour exports made from foreign wheat milled in bond.

Bureau of Agricultural Economics; compiled from Monthly Summary of Foreign Commerce of the United States.

The following factor has been used for converting flour into terms of wheat: 1 barrel of flour—the product of 4.7 bushels of grain.

¹ Includes 9,914,000 bushels of No. 1 Heavy 1934-35; 18,202,500 bushels, 1935-36.² Mixed durum included.

Bureau of Agricultural Economics. Compiled from reports of licensed inspectors through district offices of Federal grain inspection. See 1927 Yearbook, table 15, and 1928 Yearbook, table 15, for data for earlier years. The quantity loaded per car varies, but car-lot receipts have been converted to bushels by using the following conversion factors: 1929-30, 1,455; 1930-31, 1,477; 1931-32, 1,485; 1932-33, 1,479; 1933-34 to 1935-36, 1,500 bushels per car.

¹ No wheat exported from Argentina to England for period March-September 1936, during part of which time fixed prices at Buenos Aires were higher than Liverpool prices.

² Excluding occasional "on sample" prices.

Bureau of Agricultural Economics. Compiled in original currencies and units as follows: Canada—July 1926-July 1928, Reports on the Grain Trade of Canada, Winnipeg, annual. August 1928 to date, Minneapolis Daily Market Record. Monthly prices are averages of daily cash closing prices, in store at Fort William and Port Arthur. Argentina—Revista de la Bolsa de Cereales, Buenos Aires, weekly. Averages of daily prices described as follows: July 1, 1926-July 27, 1934, Barletta, for Brazil and/or consumption; July 28, 1934-Dec. 28, 1935, "Brazil"; January 1936 to date, No. 2, semihard. Grade wherever given described as 80 kg per hectoliter. Average of daily official market prices in car on dock for merchandise of export grade. Australia—July 1926-June 1931, Statistical Register of New South Wales, annual; July 1931 to date, New South Wales Statistical Bulletin, Sydney, quarterly. No description given as to how monthly averages are computed. England—Broomhall's Corn Trade News, Liverpool, daily. Averages of daily sales prices of parcels at Liverpool. Parcels are less than cargo lots.

Price converted to cents per bushel of 60 pounds at current monthly rates of exchange as reported by the Federal Reserve Board (Canadian and English prices converted at par prior to September 1931). Annual averages compiled from monthly prices carried to one decimal. For earlier Winnipeg and Liverpool prices, see the 1930 Yearbook, tables 22 and 23.

¹ Grain exchanges fulfilling conditions of the Commodity Exchange Act respecting location, facilities, and rules and which have been designated "contract markets" by the Secretary of Agriculture. Trading in grain futures on exchanges in the United States is limited by the act to contract markets. Contract markets conducting trading in wheat futures are shown in table 21.

Commodity Exchange Administration.

¹ Prior to 1908 prices are as of Dec. 1.² Prices are from Minneapolis Daily Market Record and are averages of daily prices weighted by carlot sales.³ Compiled from Commerce and Navigation of the United States 1866-1917, Foreign Commerce and Navigation of the United States, 1918; Monthly Summary of Foreign Commerce of the United States, June issues, 1919-26; January and June issues, 1927-36, and official records of the Bureau of Foreign and Domestic Commerce. Rye—General imports 1866-1909; imports for consumption, 1910-36. Rye flour—General imports 1866-1871; imports for consumption, 1872-1936. Rye flour converted to rye on the basis that 1 barrel of rye flour is the product of 6 bushels of grain.⁴ Total exports (i. e., domestic plus foreign) minus total imports; beginning 1910 domestic exports minus imports for consumption.⁵ Net imports.⁶ Less than 500 bushels.⁷ Preliminary.

Bureau of Agricultural Economics. Italic figures are census returns.

¹ Preliminary.² Excludes the Saar, since production for this territory was not included prior to 1935.³ Official estimate. Figures are probably not strictly comparable with those for previous years.

Bureau of Agricultural Economics. Compiled from official sources and International Institute of Agriculture.

Both acreage and production figures refer to the year of harvest. Harvests of the Northern Hemisphere countries are combined with those of the Southern Hemisphere which immediately follow; thus, for 1936-37 the crop harvested in the Northern Hemisphere countries in 1936 is combined with the Southern Hemisphere harvest which begins late in 1936 and ends early in 1937.

¹ Includes all Russian territory reporting for the years shown.² Exclusive of the 10 Vistula Provinces of Russian Poland and the Province of Batum in Transcaucasia.³ Exclusive of Russian Poland, Lithuania, parts of Latvia and the Ukraine, and the 2 Provinces of Batum and Elizabetpol in Transcaucasia.⁴ Beginning with this year, estimates for the present territory of the Union of Soviet Socialist Republics exclusive of Turkestan, Transcaucasia, and the Far East, which territory in 1924 produced 8,646,000 bushels.⁵ Beginning with this year post-war boundaries, therefore, not comparable with earlier years.⁶ Official estimates. Figures are probably not strictly comparable with those for previous years.⁷ Excludes the Saar, since production for this territory was not included prior to 1935.⁸ Preliminary.

Bureau of Agricultural Economics.

Both acreage and production figures refer to the year of harvest. Harvests of the Northern Hemisphere countries are combined with those of the Southern Hemisphere which immediately follow; thus, for 1936-37 the crop harvested in the Northern Hemisphere countries in 1936 is combined with the Southern Hemisphere harvest which begins late in 1936 and ends early in 1937.

¹ Prior to 1908 prices are as of Dec. 1.² Prices 1866-67 to 1898-99 are averages of the weekly quotations for No. 2 or better in annual reports of Chicago Board of Trade; subsequent prices are compiled from the Chicago Daily Trade Bulletin, average of daily prices weighted by car-lot sales, no. 3 yellow.³ Compiled from Commerce and Navigation of the United States, 1866-1917; Foreign Commerce and Navigation of the United States, 1918; Monthly Summary of Foreign Commerce of the United States, June issues, 1919-26; January and June issues, 1927-36; and official records of the Bureau of Foreign and Domestic Commerce. Corn—General imports 1866-1909 and 1912-32; imports for consumption 1910, 1911, and 1933 to date. Corn meal—Imports for consumption, 1866-1936. Corn meal converted to terms of grain on the basis of 4 bushels of corn to a barrel of meal.⁴ Total exports (domestic plus foreign) minus total imports. Beginning 1933 net exports are domestic exports minus imports for consumption.⁵ Net imports—i. e., total imports minus total exports (domestic plus foreign). Beginning 1933 net imports are imports for consumption minus domestic exports.⁶ Corn harvested for grain; total acreage of corn in 1924 is 98,401,627 acres; 1929, 97,740,740 acres; and 1934, 87,476,444 acres.⁷ Preliminary.

Bureau of Agricultural Economics. Italic figures are census returns.

¹ Preliminary.² Plan.³ 4-year average.⁴ Area seeded.⁵ European cultivation only.

Bureau of Agricultural Economics. Official sources and International Institute of Agriculture. Both acreage and production figures refer to the year of harvest. Harvests of the Northern Hemisphere countries are combined with those of the Southern Hemisphere which immediately follow; thus, for 1935-36 the crop harvested in the Northern Hemisphere in 1935 is combined with the Southern Hemisphere harvest which takes place early in 1936.

¹ Through 1913-14 estimates are for the total Russian Empire.² Total Russian Empire, exclusive of the 10 Vistula Provinces of Russian Poland and the Province of Batum in Transcaucasia.³ Exclusive of Russian Poland, Lithuania, parts of present Latvia and the Ukraine, and the Provinces of Batum and Elizabetpol in Transcaucasia.⁴ Beginning this year, estimates within present boundaries of the Union of Soviet Socialist Republics, exclusive of Turkestan, Transcaucasia, and the Far East, which territory in 1924-25 produced 26,048,000 bushels.⁵ Production in present boundaries beginning this year, therefore not comparable with earlier years.⁶ Preliminary.

Bureau of Agricultural Economics. Official sources and International Institute of Agriculture.

Production figures refer to the year of harvest. Harvests of the Northern Hemisphere countries are combined with those of the Southern Hemisphere which immediately follow; thus, for 1935-36 the crop harvested in the Northern Hemisphere countries in 1935 is combined with the Southern Hemisphere harvest which takes place early in 1936.

Bureau of Agricultural Economics. Compiled in original currencies and units as follows: Buenos Aires—Revista de la Bolsa de Cereales, Buenos Aires, weekly. Averages of daily official market prices for merchandise of export grade. New crop used beginning Apr. 1. Liverpool—Broomhall's Corn Trade News, Liverpool, weekly. Averages of Tuesday quotations through Feb. 19, 1929. Beginning Feb. 27, 1929, Wednesday quotations were used. Prices series converted to cents per bushel of 56 pounds at current monthly rates of exchange as reported by the Federal Reserve Board (Liverpool series converted at par prior to September 1931). Annual averages compiled from monthly prices carried to 1 decimal. Data for earlier period in 1928 Yearbook, tables 62 and 63.

¹ Grain exchanges fulfilling conditions of the Commodity Exchange Act respecting location, facilities, and rules and which have been designated "contract markets" by the Secretary of Agriculture. Trading in grain futures on exchanges in the United States is limited by the act to contract markets. Contract markets conducting trading in corn futures are shown in table 49.

Commodity Exchange Administration.

¹ Prior to 1908 prices are as of Dec. 1.² Compiled as follows: September-1868-July 1899, Chicago Board of Trade annual reports, average of weekly quotations for No. 2; beginning August 1899, Chicago Daily Trade Bulletin, average of daily quotations for No. 3 white, weighted by carlot sales.³ Compiled from Commerce and Navigation of the United States, 1866-1917; Foreign Commerce and Navigation of the United States, 1918; Monthly Summary of Foreign Commerce of the United States, June issues, 1919-26; January and June issues, 1927-36; and official records of the Bureau of Foreign and Domestic Commerce. Oats—general imports, 1866-1932, imports for consumption beginning 1933; oatmeal—general imports, 1866-68 and 1884-1909; imports for consumption 1869-83 and 1910-36. No exports of oatmeal reported 1866-84.⁴ Total exports (domestic plus foreign) minus total imports. Beginning 1933 net exports are domestic exports minus imports for consumption.⁵ Net imports. Total imports minus total exports (domestic plus foreign). Beginning 1933 net imports are imports for consumption minus domestic exports.⁶ Less than 0.05 percent.⁷ Preliminary.

Bureau of Agricultural Economics. Italic figures are census returns.

1 Preliminary.

2 Plan.

Bureau of Agricultural Economics. Compiled from official sources and International Institute of Agriculture.

Both acreage and production figures refer to the year of harvest. Harvests of the Northern Hemisphere countries are combined with those of the Southern Hemisphere which immediately follow; thus, for 1936-37 the crop harvested in the Northern Hemisphere countries in 1936 is combined with the Southern Hemisphere harvest which begins late in 1936 and ends early in 1937.

¹ Through 1913-14 estimates are for the total Russian Empire.² Total Russian Empire, exclusive of the 10 Vistula Provinces of Russian Poland and the Province of Batum in Transcaucasia.³ Exclusive of Russian Poland, Lithuania, parts of present Latvia and the Ukraine, and the Provinces of Batum and Elizabetopol, in Transcaucasia.⁴ Beginning this year, estimates for the present territory of the Union of Soviet Socialist Republics, exclusive of Turkestan, Transcaucasia, and the Far East, which territory in 1924-25 produced 20,248,000 bushels.⁵ Beginning with this year post-war boundaries, and therefore not comparable with earlier years.⁶ Official estimates; figures are probably not strictly comparable with those for previous years.⁷ Preliminary.

Bureau of Agricultural Economics. Compiled from official sources and International Institute of Agriculture. Production figures refer to the year of harvest. Harvests of the Northern Hemisphere countries are combined with those of the Southern Hemisphere which immediately follow; thus for 1936-37 the crop harvested in the Northern Hemisphere countries in 1936 is combined with the Southern Hemisphere harvest which begins late in 1936 and ends early in 1937.

Bureau of Agricultural Economics. Compiled in Canadian cents per bushel of 34 pounds, as follows: August 1926-July 1934, Report of the Grain Trade of Canada, Ottawa, annual; August 1934 to date, Canadian Grain Statistics, Ottawa, weekly. Averages of daily cash closing prices, in store at Fort William and Port Arthur. Price series converted to United States cents per bushel of 32 pounds at current monthly rates of exchange as reported by the Federal Reserve Board (converted at par prior to December 1928).

¹ Grain exchanges fulfilling conditions of the Commodity Exchange Act respecting location, facilities, and rules, and which have been designated "contract markets" by the Secretary of Agriculture. Trading in grain futures on exchanges in the United States is limited by the act to contract markets. Contract markets conducting trading on oats futures are shown in table 64.

Commodity Exchange Administration.

1936 ¹⁰	8,322	17.7	147,452	80.0	118,007					

¹ Prior to 1908 prices are as of Dec. 1.² From Bureau of Labor Statistics, wholesale price bulletins—monthly quotations, August 1919-September 1927, Fair to Good malting. Beginning October 1927, grade reported as feeding, but as quality remained unchanged, no change was made in comparative prices.³ Compiled from Commerce and Navigation of the United States, 1866-1917; Foreign Commerce and Navigation of the United States, 1918; Monthly Summary of Foreign Commerce of the United States, June issues, 1919-26; January and June issues, 1927-36; and official records of the Bureau of Foreign and Domestic Commerce. Malt converted to terms of barley on the basis that 1.1 bushels of malt is the product of 1 bushel of barley. Barley flour converted on the basis that 1 barrel of flour is the product of 9 bushels of barley.⁴ Malt not reported prior to 1869, reported in value only 1869-79. Barley flour not reported prior to 1918.⁵ Barley—general imports 1866-1908, imports for consumption 1909-36. Malt not reported prior to 1870; reported in value only 1870-72. General imports 1870-1913, imports for consumption 1914-36. Flour not reported prior to 1914; imports for consumption 1915-36.⁶ The difference between total exports (i. e., domestic exports plus reexports) and total imports. Net exports indicated by +, net imports indicated by -.⁷ Less than 30 weeks reported.⁸ Average for 11 months.⁹ Beginning August 1934 price changed to barley, malting, at Minneapolis.¹⁰ Preliminary.

Bureau of Agricultural Economics. Italic figures are census returns.

¹ Preliminary.² Unofficial estimate.³ Including Saarland.⁴ Plan.

Bureau of Agricultural Economics. Compiled from official sources and International Institute of Agriculture.

Both acreage and production figures refer to the year of harvest. Harvests of the Northern Hemisphere countries are combined with those of the Southern Hemisphere which immediately follow; thus, for 1936-37 the crop harvested in the Northern Hemisphere countries in 1936 is combined with the Southern Hemisphere harvest which begins late in 1936 and ends early in 1937.

¹ Through 1913-14 estimates are for the total Russian Empire.² Total Russian Empire, exclusive of the 10 Vistula Provinces of Russian Poland and the Province of Batum in Transcaucasia.³ Exclusive of Russian Poland, Lithuania, parts of present Latvia and the Ukraine, and the Provinces of Batum and Elizabetpol, in Transcaucasia.⁴ Beginning this year, estimates within present boundaries of the Union of Soviet Socialist Republics, excluding Turkestan, Transcaucasia, and the Far East, which regions in 1924-25 produced 20,897,000 bushels.⁵ Post-war boundaries beginning this year, and therefore not comparable with earlier years.⁶ Beginning this year weighed bushels, those reported for the earlier years being measured bushels.⁷ Official estimates; figures are probably not strictly comparable with those for previous years.⁸ Preliminary.

Bureau of Agricultural Economics. Compiled from official sources and International Institute of Agriculture.

Production figures refer to the year of harvest. Harvests of the Northern Hemisphere countries are combined with those of the Southern Hemisphere which immediately follow; thus for 1936-37 the crop harvested in the Northern Hemisphere countries in 1936 is combined with the Southern Hemisphere harvest which begins late in 1936 and ends early in 1937.

¹ Preliminary.

Bureau of Agricultural Economics; based on returns from special price reporters. Monthly prices, by States, weighted by production to obtain a price for the United States; average for the year obtained by weighting State price averages for the crop-marketing season. Data for earlier years in December 1935 issue of Crops and Markets, p. 531.

Bureau of Agricultural Economics. Compiled in Canadian cents per bushel of 48 pounds as follows: August 1926-July 1930, Report on the Grain Trade of Canada, Ottawa, annual; August 1930 to date, Canadian Grain Statistics, Ottawa, weekly. Averages of daily cash closing prices, in store at Fort William and Port Arthur.

Price series converted to United States cents per bushel at current monthly rates of exchange as reported by the Federal Reserve Board (converted at par prior to December 1928).

¹ Prior to 1908 prices are as of December 1.² The figures shown, 1919-20, are averages of daily closing prices compiled from annual reports of the Minneapolis Chamber of Commerce; beginning 1921, averages of daily prices weighted by carlot sales, compiled from Minneapolis Daily Market Record.³ Compiled from Monthly Summary of Foreign Commerce of the United States June, July, and August issues, 1889-1926; January, June, July, and August issues 1927-36, and official records of the Bureau of Foreign and Domestic Commerce. 1 bushel of flaxseed weighs 56 pounds; 1 bushel of seed yields approximately 2½ gallons of oil, and 1 gallon of oil weighs 7½ pounds.⁴ Total imports minus total exports (domestic plus foreign). Beginning 1933 imports for consumption minus domestic exports.⁵ Net exports.⁶ Beginning 1933 figures are imports for consumption.⁷ Preliminary.

Bureau of Agricultural Economics. Italic figures are census returns.

¹ Preliminary.² 4-year average.³ Estimate of the Bureau of Agricultural Economics.⁴ 2-year average.⁵ Flax and hemp.⁶ Totals are for countries reporting all years, acreage, seed, and fiber considered separately.⁷ Area sown.⁸ Excludes a few minor producing countries for which no statistics are available and which do not enter into world trade.

Bureau of Agricultural Economics. Official sources and International Institute of Agriculture.

Both acreage and production figures refer to the year of harvest. Harvests of the Northern Hemisphere are combined with those of the Southern Hemisphere which immediately follow; thus, for 1935-36 the crop harvested in the Northern Hemisphere countries in 1935 is combined with the Southern Hemisphere harvest which begins late in 1935 and ends early in 1936.

Bureau of Agricultural Economics. Compiled in paper pesos per 100 kg as follows: August 1926-December 1929, The Review of the River Plate, Buenos Aires, weekly, averages of quotations for Thursday of each week; January 1930 to date, Revista de la Bolsa de Cereales, Buenos Aires, weekly, averages of daily official market prices. (The Thursday prices in these publications are identical.)

Price series converted to cents per bushel at current monthly rates of exchange as reported by the Federal Reserve Board.

¹ Preliminary.² 3-year average.³ 2-year average.⁴ 1 year only.⁵ 4-year average.

Bureau of Agricultural Economics. Both acreage and production figures refer to the year of harvest. Harvests of the Northern Hemisphere countries are combined with those of the Southern Hemisphere which immediately follow; thus, for 1935-36 the crop harvested in the Northern Hemisphere countries in 1935 is combined with the Southern Hemisphere harvest which begins late in 1935 and ends early in 1936.

¹ China is an important producing country, but official statistics are not available. The Shanghai office of the Bureau of Agricultural Economics has made the following estimates of production in China expressed in terms of millions of pounds of cleaned rice: 90,200 in 1930; 77,060 in 1931; 92,800 in 1932; 88,800 in 1933; 72,800 in 1934; and 83,000 in 1935.

² Estimates of the production of rice on nonirrigated land are not available prior to 1917-18. Estimates for the years 1909-10 to 1916-17 as given here are for the production on irrigated land. Estimates for the years 1917-18 to 1934-35 are for the total production.

³ Estimated figures obtained by multiplying acreage under rice as classified for revenue purposes up to 1912-13, and acreage as reported by the Department of Land and Agriculture from 1912-13 on by an average yield for the years 1920-21 to 1923-24, for which years official estimates have been published of acreage, yield, and total production.

⁴ Preliminary.

Bureau of Agricultural Economics. Compiled from official sources and International Institute of Agriculture. Both acreage and production figures refer to the year of harvest. Harvests of the Northern Hemisphere countries are combined with those of the Southern Hemisphere which immediately follow; thus for 1935-36 the crop harvested in the Northern Hemisphere countries in 1935 is combined with the Southern Hemisphere harvest which begins late in 1935 and ends early in 1936. Estimates of world rice production for the period 1900-1901 to 1908-09 appear in the 1924 Yearbook, table 138.

Bureau of Agricultural Economics. Compiled in Indo-Chinese piastres per 100 kg from the Monthly Crop Report and Agricultural Statistics, International Institute of Agriculture, Rome. Averages of Friday quotations. Prior to January 1928, description did not include the term "25 percent broken." Price series converted to dollars per 100 pounds at current monthly rates of exchange as follows: August 1926-December 1929, exchange rates of the French Indo-Chinese piastre, from the Handbook of Foreign Currency and Exchange, U. S. Department of Commerce, 1930, p. 76; January 1930 to date, exchange rates of the French franc (10 francs=1 piastre), as reported by the Federal Reserve Board.

¹ Preliminary.² International Yearbook of Agriculture Statistics.³ Year beginning April.⁴ Does not include Manchuria after June 1932.⁵ Not shown prior to 1932; included in data for China.⁶ Java and Madura only.⁷ 4-year average.

Bureau of Agricultural Economics. Official sources except where otherwise noted. Mostly milled rice. Under rice is included paddy, unhulled, rough, milled, polished, broken, and cargo rice, in addition to rice flour and meal. Rice bran is not included. Rough rice, or paddy, where specifically reported, has been reduced to terms of milled rice at the ratio of 162 pounds of rough or unhulled to 100 pounds of milled. "Rice, other than whole or cleaned rice" in the returns of the United Kingdom is not considered paddy, since the chief sources of supply indicate that it is practically all hulled rice. Cargo rice, a mixture of hulled and unhulled, is included without being reduced to terms of milled. Broken rice and rice flour and meal, are taken without being reduced to terms of whole milled rice.

¹ Preliminary.

Bureau of Agricultural Economics. Based on returns from special price reporters. Monthly prices, by States, weighted by production to obtain a price for the United States; average for the year obtained by weighting State price averages for the crop-marketing season. Data for earlier years in December 1935 issue of Crops and Markets, p. 531.

TABLE 102.—*Sorghums¹ cut for grain, forage, and all purposes: Acreage, production, and season average price per bushel received by farmers, United States, 1919-36*

Year	Grain			Forage			All purposes

¹ For 1909 to 1926, inclusive, the acreage figures relate to June 25 instead of July 1.² Department figures are in running bales for all years prior to 1899, and in 500-pound gross-weight bales 1899-1936. Agricultural census figures for all periods are in running bales.³ Prior to 1908 prices are as of Dec. 1.⁴ New York prices 1866-67 to August 1871, Chronological and Statistical History of Cotton, by E. J. Donnell; 1871-72 to August 1900, Commercial and Financial Chronicle, average of daily quotations, beginning 1900 from reports of the New York Cotton Exchange except Sept. 23-Nov. 16, 1914, when the exchange was closed (prices for this period from the Commercial and Financial Chronicle). New Orleans prices were from same sources prior to Aug. 16, 1915, since which date, from reports of the New Orleans Cotton Exchange direct to this bureau. These central market prices are for Middling grade, 7/8-inch staple, only.⁵ Excluding linters from 1914 to 1936.⁶ Compiled from Commerce and Navigation of the United States, 1866-1917; Foreign Commerce and Navigation of the United States, 1918; Monthly Summary of Foreign Commerce of the United States, June and July 1919-34, and January 1927-36.⁷ Bales of 500 pounds gross weight.⁸ Bales of 478 pounds net, which are equivalent to bales of 500 pounds gross weight.⁹ Total exports (domestic plus foreign) minus imports.¹⁰ Year beginning July.¹¹ 13 months, July-July.¹² Average for 9 months only. Exchange closed Aug. 1-Nov. 17, on account of war.¹³ Area in cultivation July 1 less removal of acreage reported by the Agricultural Adjustment Administration, less abandonment on area not under contract.¹⁴ Includes imports for consumption, beginning January 1934; reexports not considered beginning this date¹⁵ Preliminary.¹⁶ Season average price to Dec. 1.

Bureau of Agricultural Economics. Agricultural census figures in italics. Production figures conform with census annual ginning enumerations, with allowance for cross State ginnings. State figures rounded to thousands and added for United States total. Cotton grown in Baja California, old Mexico, ginned in California, from 1913 to 1924 has been excluded.

¹ Based on reports of the Chinese Cotton Statistics Association. Figures represent the crop in the most important cotton-producing Provinces where the commercial crop is grown. Most of the cotton produced in other Provinces is used for home hand-loom consumption.

² Figures as reported by the U. S. Bureau of the Census, including the cotton destined to enter commercial channels for factory purposes. Estimates of the commercial crop in China are included.

³ Bales of 478 pounds net.

⁴ From 1909-10 to 1916-17 bales of 500 pounds net, and from 1917-18 to 1921-22 in bales of 478 pounds net. Beginning with 1922-23, American in running bales and foreign in bales of 478 pounds net.

⁵ Preliminary.

Bureau of Agricultural Economics; from official sources, International Institute of Agriculture, and estimates of the Bureau of Agricultural Economics, except as noted.

The crop year is from Aug. 1 to July 31. For the United States prior to 1914 the figures apply to the year beginning Sept. 1.

¹ Production is expressed in running bales in this table and therefore the figures are not the same as those shown in tables where bales of 500 pounds gross weight are used. Consumption and carry-over statistics for American cotton are available only in running bales, and therefore production and exports are shown in running bales.

² Total distribution usually is greater than total supply due principally to the inclusion, in all distribution items, of the "city crop", which consists of rebaled samples and pickings from cotton damaged by fire and weather.

Bureau of Agricultural Economics: compiled from reports of the Bureau of the Census.

Quantities are in running bales, round bales counted as half bales and foreign in 500-pound bales.

¹ "American" cotton means cotton which is grown in the United States.

² American in running bales and other growths in bales of 478 pounds net. Prior to 1919-20 the quantities given for world consumption of all growths were reported in bales of 500 pounds net and have been converted to equivalent 478-pound bales.

³ Year beginning Sept. 1.

Bureau of Agricultural Economics; compiled from reports of the Bureau of the Census except consumption figures for American cotton in foreign countries, which are compiled from the Cotton Yearbook of the New York Cotton Exchange, 1936, p. 130.

The figures for the consumption of "other growths" in the world and in foreign countries were computed by deduction.

¹ Crop figures based on census reports on ginnings and on the classification of samples procured from ginneries during the season; carry-over figures based on Census reports on carry-over stocks and on the classification of samples representing cotton on hand. Quantities of American upland and American-Egyptian cotton are given in running bales, except that round bales are counted as half bales; quantities of foreign cotton are given in equivalent 500-pound bales.

² For carry-over of foreign cotton by staple lengths, see table 113.

³ Preliminary.

⁴ According to the Bureau of the Census.

⁵ Includes bales not otherwise classified above.

⁶ In accordance with sec. 5, United States Cotton Futures Act.

Bureau of Agricultural Economics.

¹ An average of Hinganghat, Yeotmal, and Akora, referred to as Acala or as the Acala group. This group includes all quoted imported Indian cotton between Broach and Bengal in quality and represents a large part of the Indian cotton consumed in Japan.

² Average of two 10-day periods.

³ Average of 11 months.

⁴ One 10-day period.

Bureau of Agricultural Economics. Compiled in yen per picul of 132.28 pounds from 'The Ten-Days' Return of Cotton, Cotton Yarn, Osaka, a publication issued 3 times a month. Data through December 1927 compiled from this publication by Fred Taylor, principal marketing specialist, while in Kobe, Japan. Prices are averages of the high and low quotations for each 10-day period.

Price series converted to cents per pound at current monthly rates of exchange as reported by the Federal Reserve Board.

¹ Estimated by comparison with prices of Broach at Bombay.² Average of 11 months.³ Price for this month taken from Monthly Crop Report and Agricultural Statistics, Rome.⁴ Exchange rates not available. September rate used for October and December rate for November.

Bureau of Agricultural Economics. Compiled in original currencies and units as follows: Indian—August 1926–August 1932, Bombay Cotton Annual, Bombay, averages of daily spot or near futures quotations. (Spot quotations were always on basis F. Berar. The tendency in this period was to quote December–January delivery prices approximately from August–November, and spot prices from December–July); September 1932 to date, The Financial News, Bombay, weekly, averages of Wednesday or Thursday spot quotations. Chinese—August 1926–December 1932, An Analysis of Shanghai Commodity Prices, Shanghai, 1933; January–December 1933, Shanghai Market News Report, Shanghai, quarterly; January–February 1934, estimated from other kinds of Chinese cotton in Shanghai; March–April 1934, Chinese Economic Bulletin, Shanghai, weekly; May 1934 to date, Prices and Price Indexes in Shanghai, monthly. Prices were for the 15th of each month. Until January 1933 description was: Cotton, raw, Tungchow. Egyptian—Monthly Agricultural and Economic Statistics, Cairo, August 1926–January 1930, averages of Thursday spot prices; February 1930 to date, averages of daily spot prices. Brazilian—August 1926–February 1935, Wileman's Brazilian Review, Rio de Janeiro, weekly, averages of Saturday quotations; March 1935 to date, monthly reports of American Consular Service, Rio de Janeiro, averages of daily spot prices of Nos. 3 and 5, which are compiled as separate series.

Price series converted to cents per pound at current monthly rates of exchange as reported by the Federal Reserve Board (Chinese converted at exchange rates for 15th of month).

¹ Preliminary.² Beginning 1933-34, imports for consumption.³ 3-year average.⁴ Calendar year.

Bureau of Agricultural Economics. Official sources except where otherwise noted. Bales of 500 pounds gross weight or 478 pounds net. The figures for cotton refer to ginned and unginned cotton, but do not include linters, mill waste, cotton batting, scarto (Egyptian and Sudan), when separately stated. Wherever unginned cotton has been separately stated in the original reports it has been reduced to ginned cotton in this statement at the ratio of 3 pounds unginned to 1 pound ginned.

1936-37 ³	5,513	35.41	195,195					

¹ Estimated from the production of lint cotton, assuming 65 pounds of seed for each 35 pounds of lint. Refers to the cotton crop of the year stated.

² Crushings and products are not limited to the crop specified.

³ Preliminary.

⁴ The reported production of meal for years beginning August 1932 has averaged 45 percent of the weight of seeds crushed.

Bureau of Agricultural Economics. Quantity crushed and products from annual reports of the Bureau of the Census, Cotton Production and Distribution.

¹ Where quotations are missing, average is for months shown.² January 1929-July 1930 quoted in barrels.³ Less than 10 quotations during the month. Other quotations were bids.

Bureau of Agricultural Economics. Compiled from the Oil Paint and Drug Reporter, except October 1932-June 1933, from the New York Journal of Commerce, when prices were not quoted in the usual source. Prices are average of quotations for Saturdays during the month, except September 1928-July 1934, which are averages of daily quotations.

Data for 1909-10 to 1925-26 are available in the 1930 Yearbook, table 149.

¹ Cane sugar, raw, converted to refined basis by multiplying by the following factors up to year 1931-32: United States, 0.932; Puerto Rico, 0.9393; Hawaii, 0.9358; Philippine Islands, 0.95; beginning with 1931-32, United States, 0.9418; Puerto Rico and Philippine Islands, 0.9460; Hawaii, 0.9617.

² Figures for 1909-10 to 1923-24 include Louisiana and Texas, 1924-25 to 1928-29, Louisiana only; beginning 1929-30, Louisiana and Florida.

³ Preliminary.

Bureau of Agricultural Economics; production data compiled as follows: United States from the Department of Agriculture, except cane sugar, 1909-10 and 1910-11, which are from Willett & Gray; Hawaii from Hawaiian Sugar Planters' Association; Puerto Rico and Philippines from official sources of those islands. Figures for earlier years appear in previous issues of the Yearbook.

¹ Calculated quantity of sugarcane ground for sugar based upon the production of sugar as made and the annual average number of tons of sugarcane required to produce 1 ton of sugar.

² 1 ton of sugar as made is assumed to be equal to 0.95 ton of refined from 1924-25 to 1930-31 and 0.946 ton of refined from 1931-32 to 1936-37, as recommended by the joint committee on sugar statistics of the Departments of Commerce and Agriculture.

³ Preliminary.

Bureau of Agricultural Economics. Compiled from reports of the Philippine Department of Plant Industry and Customs Bureau.

1936-37 ³				952,000	900,592		

¹ 1 ton of sugar as made is assumed to be equivalent to 0.9393 ton of refined from 1924-25 to 1930-31 and 0.946 ton of refined from 1931-32 to 1936-37, as recommended by the joint committee on sugar statistics of the Departments of Commerce and Agriculture.

² Actual quantity of sugarcane harvested, including 6,391,187 tons of sugarcane cut for the production of sugar, and 1,133,871 for the production of high-grade molasses. It is estimated that about 1,000,000 tons of sugarcane were not harvested in 1934-35.

³ Preliminary.

Bureau of Agricultural Economics. Compiled from annual reports of the Governor of Puerto Rico.

¹ Sugar campaign, usually not ended before February in Louisiana and April in Florida, following season of growth of cane.

² In Louisiana, as made; in Florida, 96° equivalent.

³ 1 ton of raw sugar is assumed to be equivalent to 0.932 ton of refined for 1919-30, and 0.9418 ton of refined for 1931-36, as recommended by the joint committee on sugar statistics of the Departments of Commerce and Agriculture.

⁴ Sirup production not included. See Table 147.

⁵ Preliminary.

Bureau of Agricultural Economics. For earlier years see 1934 Yearbook, table 141.

¹ Beet and cane sugar only.² Duty free, from Hawaii, Puerto Rico, and the Philippine Islands (Virgin Islands included 1917 and subsequently).³ No account taken of sugar imported in other forms. Imports from the Philippine Islands and Virgin Islands excluded, reexports deducted through 1932-33; imports for consumption beginning 1933-34.⁴ Shipments to Hawaii and Puerto Rico included, also to Alaska beginning 1933-34, and to Virgin Islands beginning January 1935. Direct exports to foreign countries, through customs districts of noncontiguous territories excluded.⁵ Sugar used in the manufacture of other commodities for export on which drawback was paid.⁶ No account taken of stocks at the beginning or end of year.⁷ Raw sugar converted to refined by multiplying by the following factors: 1909-10 to 1930-31, Cuba and Hawaii, 0.9358; Puerto Rico, 0.9393; Philippines, 0.95; all others (Santo Domingo, British West Indies, Louisiana, etc.), 0.932. Beginning 1931-32, Hawaii, 0.9617; Puerto Rico, Philippines, and Virgin Islands, 0.946; Cuba and all others 0.9418. Use reciprocal of above factors to reduce refined sugar to raw.

Bureau of Agricultural Economics. Trade figures from the Bureau of Foreign and Domestic Commerce.

¹ Preliminary.² Reduced production on account of drought.³ Includes Turkey in Asia.⁴ 4-year average.⁵ Excluding countries where production is very small and for which data are unobtainable.⁶ The figures quoted for India are for the production of gur, a low grade of sugar polarizing between 50° and 60°. Practically the entire crop is consumed within the country.⁷ Figures for Java are for the calendar years 1925-36.

Bureau of Agricultural Economics; official sources, International Institute of Agriculture, sugar associations, and trade estimates. Figures are for the crop years 1925-26 to 1936-37 for the countries in which the sugar-harvesting season begins in the fall months and is completed during the following calendar year, except in certain cane-sugar-producing countries in the Southern Hemisphere, such as Argentina, Australia, Mauritius, Union of South Africa, etc., where the season begins in May or June and is completed in the same calendar year. Production in these countries is for the calendar years 1925-36.

¹ Figures are for the crop years 1909-10 to 1936-37 for the countries in which the sugar-production season begins in the fall months and is completed during the following calendar year, except in certain cane-sugar-producing countries where the season begins in May or June and is completed in the same calendar year. Production in these countries is for the calendar years 1909-36.

² Production of cane and beet sugar in terms of raw sugar.

³ The figures quoted for India are for the production of gur, a low grade of sugar polarizing between 50° and 60°. Practically the entire crop is consumed within the country.

⁴ All grades of sugar reduced to terms of head sugar, a grade of sugar which contains at least 96.5 percent sucrose. Figures for Java are for the calendar years 1909-36.

⁵ Figures for 1909-10 to 1917-18 are for pre-war boundaries.

⁶ Figures are incomplete through 1920-21; 1914-15 includes Prussian Poland only; 1915-16 to 1919-20 include Prussian Poland and Congress Poland; 1920-21 includes Prussian Poland, Congress Poland, and Galicia.

⁷ Figures for 1909-10 to 1918-19 refer to pre-war boundaries; 1914-15 to 1918-19 are exclusive of invaded territory.

⁸ Bohemia, Moravia, and Silesia only.

⁹ Preliminary.

Bureau of Agricultural Economics. Estimated world total sugar production for the period 1895-96 to 1908-09 in 1924 Yearbook, table 386.

¹ Data are averages of prices as reported by retail dealers as of the 15th of month in 51 of the larger cities of the United States. August 1933-June 1936 prices are reported twice during the month; those shown are nearest the 15th.

Bureau of Agricultural Economics; compiled from Bureau of Labor Statistics retail prices.
Data for 1913-26 available in 1930 Yearbook, table 162.

¹ Acreage and production figures are for the harvesting season. In the Northern Hemisphere, data for 1932-33, for example, are for crops harvested in the summer and fall of 1932; in the Southern Hemisphere they are for crops harvested in the spring of 1933, except in the Netherland India, where the harvest was largely completed in 1932.

² Calculated from actual acreage and production, except in instances where rounded figures only were available.

³ Preliminary. Figures for earlier years may be revised on the basis of later information.

⁴ 1 year only.

⁵ Less than 500 acres.

⁶ Area and production shown are for 20 Provinces only, but the missing data are of slight importance.

⁷ Exclusive of Baroda.

⁸ 3-year average; exclusive of North West Frontier Province.

⁹ Exclusive of North West Frontier Province.

¹⁰ Exclusive of North West Frontier Province and Baroda.

¹¹ 4-year average.

¹² 3-year average.

¹³ Native production shown is that produced by natives and bought up by the estates. An official estimate of the native crop not bought up by estates, based upon exports for the crop year, indicates a production which has varied from 33,000,000 pounds to 87,000,000 pounds annually during the past decade.

¹⁴ 2-year average.

¹⁵ Cured weight.

¹⁶ Production on native locations and reserves is estimated at about 1,000,000 pounds annually.

¹⁷ Exclusive of China.

Bureau of Agricultural Economics; compiled from official sources, International Institute of Agriculture, and reports of United States consuls, commercial attaches, agricultural attaches, and commodity specialists in foreign countries.

¹ Data in this table are not comparable with the same tables in the 1934 and 1935 Yearbooks of Agriculture. Stock conversions from storage weight to farm-sales weight, have been revised on the basis of more detailed information. Revised data for earlier years are published in the first annual report on tobacco statistics, Statistical Bulletin 58, issued by this Bureau. Production 1929-35, revised June 1936.

² Stocks as of July 1 and disappearance beginning July 1.

³ Stocks shown represent those held by dealers and manufacturers who are required by law to file quarterly reports. Farm-sales weight is calculated by converting stemmed to unstemmed and storage weight to farm-sales weight, by allowing for normal losses of dirt, sand, moisture, and stem in handling and preparing tobacco.

⁴ Preliminary.

⁵ Prior to 1929, separate data by types were not available.

⁶ Stocks as of Jan. 1 of year following production, and disappearance beginning Jan. 1 of year following production.

⁷ Prior to 1929 tobacco stocks reports included Pennsylvania and New York. Pennsylvania is believed to refer entirely to type 41. New York is believed to include type 53 produced both in New York and Pennsylvania.

⁸ Includes primed Havana Seed, which has not been reported separately since 1929.

Bureau of Agricultural Economics; stocks prior to 1929 compiled from reports of the Bureau of the Census.

¹ The quantities given are unstemmed equivalent of all kinds of tobacco used. Stemmed leaf and scraps, etc., used in manufacturing have been converted to unstemmed equivalent at the ratio of 3 pounds stemmed to 4 pounds unstemmed: in respect to leaf used in the manufacture of tobacco and snuff, prior to 1928 no conversion factor was used, but in this table all figures are compiled on the conversion basis named.

Bureau of Agricultural Economics; compiled from annual reports of the Commissioner of Internal Revenue, Treasury Department.

¹ Included in total crop. By commercial crop is meant that portion of the total crop which is sold for consumption as fresh fruit.

² Compiled from Monthly Summary of Foreign Commerce of the United States, June issues, 1919-26; January and June issues, 1927-36; and official records of the Bureau of Foreign and Domestic Commerce.

³ Dried and canned are converted to terms of fresh apples on following basis: 1 pound of dried is equivalent to about 7 pounds fresh; 1 pound of canned is equivalent to about 2 pounds fresh; 48 pounds fresh equal 1 bushel. No reexports reported.

⁴ Total exports (domestic plus foreign) minus imports. Beginning 1933 domestic exports minus imports for consumption.

⁵ Comprises barrels, baskets, and boxes; does not include "apple waste."

⁶ Beginning January 1933, includes "apple waste," not separately reported prior to this date.

⁷ Includes 6,724,000 bushels in 1926, 220,000 bushels in 1932, and 1,017,000 bushels in 1935, not harvested on account of market conditions. Prices are computed on the harvested crop.

⁸ Beginning 1933-34, imports for consumption.

⁹ Preliminary.

¹⁰ December forecast of total shipments from 1936 crop.

Bureau of Agricultural Economics. Italic figures are census returns. Production of dried apples as reported by Giannini Foundation, Berkeley, Calif. Production of canned apples as reported by trade sources.

¹ Combined estimates for market and for sauerkraut are given in this portion of the table.² Includes some quantities not harvested on account of market conditions: California, 7,500 tons in 1931; Florida, 7,100 tons in 1931; Texas, 37,500 tons in 1931 and 45,800 tons in 1936; Alabama, 3,300 tons in 1935 and 2,000 in 1936; South Carolina (second early), 10,200 tons in 1931 and 6,000 in 1936; Virginia, southwest (intermediate), 2,000 tons in 1935; Colorado, 4,000 tons domestic and 8,300 tons Danish in 1932; New York (late), 12,000 tons domestic in 1932. Price refers to harvested portion of crop.³ Average price for late Danish crop is computed only to Dec. 1.⁴ All of these figures are included in the upper portion of this table, but they are segregated here for convenient reference.⁵ Other States includes Iowa, Maryland, New Jersey, North Carolina, Oregon, Pennsylvania, Tennessee, Texas, Utah, and Virginia.

Bureau of Agricultural Economics; estimates based on returns from crop reporters and sauerkraut manufacturers.

¹ Crop-movement season covers 17 months, from December through the second following April; i. e., the 1925 season begins December 1924 and ends April 1926. Figures for certain States include shipments for month preceding or following the regular crop-movement season.

² Preliminary.

³ Includes 1 car for emergency relief.

Bureau of Agricultural Economics; compiled from daily and monthly reports received by the Bureau from officials and local agents of common carriers throughout the country.

Shipments as shown in carlots include those by boat reduced to carlot basis. Shipments by truck not included.

¹ Crop-movement season covers 21 months, beginning in October of the previous year in such early shipping States as California, Louisiana, and Texas, and extending through June of the following year, i. e., the 1924 season begins in October 1923, and ends in June 1925, in order to include shipments from storage in Northern States and to have season comparable with acreage and production.

² Preliminary.

³ Includes 91 cars for emergency relief.

Bureau of Agricultural Economics; compiled from daily and monthly reports received by the Bureau from officials and local agents of common carriers throughout the country.

Shipments as shown in carlots include those by boat reduced to carlot basis. Shipments by truck not included.

¹ Crop-movement season covers 20 months, from September through the second following April; i. e., the 1925 season begins September 1924 and ends April 1926.

² Preliminary. Includes shipments through Jan. 16, 1936.

Bureau of Agricultural Economics; compiled from daily and monthly reports received by the Bureau from officials and local agents of common carriers throughout the country.

Shipments as shown in carlots include those by boat reduced to carlot basis. Shipments by truck not included.

¹ Estimates include only certain States where total production can be calculated from commercial sales (shipments, canning, cold pack, etc.) and differ from previously published commercial estimates for some States by an increased allowance for farm and local use.

² Production includes both sweet and sour cherries.

³ Preliminary.

⁴ Includes some quantities not harvested on account of price as follows: New York, 2,550 tons in 1931 and 6,663 tons in 1932; California, 3,000 tons in 1931 and 2,500 tons in 1932.

⁵ Short-time average.

Bureau of Agricultural Economics.

¹ Estimates of production include fruit consumed on farms, sold locally, and used for manufacturing purposes, as well as that shipped. Fruit ripened on the trees but destroyed by freezing or storms prior to picking is not included. The estimates cover the crop produced from the bloom of the year shown. In California, where picking continues throughout the year, the estimates are for 12-month periods beginning Nov. 1. In other States the season begins about Sept. 1.

² Includes tangerines.

³ California prices are for bulk fruit at the packing-house door; Florida prices are for packed boxes less selling charges on the fruit shipped out of State so handled and bulk prices for other marketings. Florida lime prices, 1919-23, are Dec. 1 prices.

⁴ Net content of boxes varies. In California and Arizona the approximate average for oranges is 70 pounds net and grapefruit 60 pounds; in Florida and other States oranges 90 pounds and grapefruit 80 pounds; California lemons, about 76 pounds net.

⁵ Includes 977,000 boxes of oranges in 1933, 754,000 in 1935, and 34,000 boxes of grapefruit in 1935 donated for charity and eliminated, and which are excluded in computing value.

⁶ As estimated from prospects on Apr. 1, 1937.

Bureau of Agricultural Economics.

¹ Year beginning July; reports of Bureau of Foreign and Domestic Commerce.² Cases on basis of 24 no. 2 cans.³ "Fruit juice"; probably mostly grapefruit juice.

Bureau of Agricultural Economics.

Figures on the Florida pack of canned grapefruit were obtained as follows: 1921-22 to 1927-28, averages of various trade estimates; 1928-29, estimated by the Florida Grapefruit Cannery Association; 1929-30 to date, complete surveys made by the Bureau of Foreign and Domestic Commerce. A box of fresh fruit in Florida is estimated to pack slightly more than a case of canned fruit.

Some grapefruit also is canned in Texas, Arizona, and California. In 1932-33 Arizona packed 700 cases of grapefruit hearts and 3,200 cases of juice. In 1933-34 the Arizona pack was 570 cases of hearts and 5,900 cases of juice, besides 68,000 gallons of juice in barrels, equivalent to 20,000 cases of 24 no. 2 cans. In 1934-35 California packed the equivalent of 4,278 cases of 24 no. 2 cans of hearts and the equivalent of 18,811 cases of 24 no. 2 cans of grapefruit juice. States other than Florida and California packed 7,243 cases of 24 no. 2's of hearts in 1934-35, and the equivalent of 432,355 cases of 24 no. 2 cans of juice. During the 1935-36 season, Texas packed the equivalent of 23,614 cases of hearts and 346,942 cases of juice on the basis of 24 no. 2 cans per case, and California and Arizona together packed the equivalent of 51,386 cases of grapefruit juice.

Considerable quantities of canned grapefruit are exported from the United States. Domestic exports for the fiscal year 1933-34 were 31,898,086 pounds, or the equivalent of 1,063,270 cases. In the fiscal year 1934-35, the domestic exports were 28,865,624 pounds, or the equivalent of 962,187 cases, and in the year 1935-36 they amounted to 29,920,805 pounds, or the equivalent of 997,360 cases of 24 no. 2 cans. Puerto Rico also ships to foreign countries.

¹ Compiled from Monthly Summary of Foreign Commerce of the United States, June issues, 1920-26 January and June issues, 1927-36.² Total exports (domestic plus foreign) minus total imports. Beginning 1933-34 domestic exports minus imports for consumption.³ Net imports equal total imports minus total exports (domestic plus foreign).⁴ January-June 1922; reported in value only prior to this date.⁵ Includes some quantities not harvested on account of market conditions as follows: 100,000 tons in 1922; 138,000 in 1925; 15,000 in 1926; 142,000 in 1927; 153,000 in 1928; 433,000 in 1930, including 316,000 tons sold but left on the vines; 10,000 in 1931; 154,000 in 1932, and 3,000 in 1933. Price and value are based on the quantities actually harvested, plus a quantity of fruit that was sold but left on the vines in 1930.⁶ Less than 0.05 percent.⁷ Beginning 1933-34 imports for consumption.⁸ Preliminary.

Bureau of Agricultural Economics.

¹ Crop-movement season extends from June 1 through December of a given year. Figures for California include shipments in January, February, and March following the regular crop-movement season.

² Preliminary.

³ Includes 6 cars in May 1934.

Bureau of Agricultural Economics; compiled from daily and monthly reports received by the Bureau from officials and local agents of common carriers throughout the country.

Shipments as shown in carlots include those by boat reduced to carlot basis. Shipments by truck not included.

¹ Dried peaches converted to terms of fresh on the basis that dried peaches equal 19 percent of fresh. Canned peaches converted to terms of fresh on the basis that 1 pound canned equals about 1 pound fresh; 48 pounds of fresh equals 1 bushel. No reexports reported.

² From 1919 to 1922, Sept. 15 price; 1923-25, Sept. 15 price in North, Aug. 15 price in South.

³ Compiled from Monthly Summary of Foreign Commerce of the United States, June issues, 1919-26, January and June issues, 1927-36.

⁴ Canned peaches were reported in value only, prior to July 1, 1922.

⁵ No exports reported prior to Jan. 1, 1922; figures for 1921 represent exports Jan. 1, 1922 to June 30, 1922.

⁶ Includes some quantities not harvested on account of market conditions as follows: 1,297,000 bushels in 1926; 2,709,000 in 1927; 3,842,000 in 1928; 10,639,000 in 1930, including 6,180,000 sold but left on the trees; 8,063,000 in 1931, including 3,938,000 sold but left on the trees; 6,710,000 in 1932; 3,647,000 in 1933, including 1,480,000 sold but left on the trees, and 2,208,000 in 1934. Values are based on the quantity actually harvested plus a quantity of fruit that was sold but left on the trees in 1930, 1931, and 1933.

⁷ Preliminary.

Bureau of Agricultural Economics. Italic figures are census returns. Production of dried peaches as reported by California Cooperative Crop-reporting Service. Production of canned peaches as reported by Giannini Foundation, Berkeley, Calif.

1936 ⁴ -----	24,128	.67	16,272	-----	-----	-----	-----	-----	-----	-----

¹ Prior to 1926, prices are as of November 15.

² Canned pears converted to terms of fresh on the basis that canned fruit is equivalent to about 85.5 percent of fresh; dried pears converted to terms of fresh on the basis that 1 pound dried equals about 5.5 pounds fresh; 50 pounds fresh equals 1 bushel. No imports of pears reported. Compiled from Monthly Summary of Foreign Commerce of the United States, June issues, 1923-26, January and June issues, 1927-36.

³ Exports were reported in value only prior to July 1, 1922.

⁴ Includes some quantities not harvested on account of market conditions as follows: 42,000 bushels in 1927; 62,000 in 1928; 1,292,000 in 1930; 625,000 in 1931; 2,666,000 in 1932; 1,667,000 in 1933, and 375,000 in 1934. Prices and value are computed on the harvested crop.

⁵ January-June 1929. Not previously reported.

⁶ Preliminary.

Bureau of Agricultural Economics. Italian figures are census returns. Production of dried pears as reported by California Cooperative Crop-reporting Service. Production of canned pears as reported by Giannini Foundation, Berkeley, Calif.

¹ Crop movement season covers 12 months, from June of one year through May of the following year. Figures for California for 1930-31 to 1932-33 include shipments in month preceding and following the regular crop-movement season.² Preliminary.

Bureau of Agricultural Economics; compiled from daily and monthly reports received by the Bureau from officials and local agents of common carriers throughout the country.

Shipments as shown in carlots include those by boat reduced to carlot basis. Shipments by truck not included.

¹ Bushels containing approximately 30 pounds, unshelled.² Short-time average.³ Includes some quantities not harvested on account of market conditions: Colorado, 117,000 bushels in 1932 and 106,000 in 1935. Price refers to harvested portion of crop.⁴ Reported on shelled basis.⁵ Other States includes California, Idaho, Iowa, Kansas, Nebraska, New Jersey, Oklahoma, Tennessee, Texas and Wyoming.

Bureau of Agricultural Economics; estimates based on returns from crop reporters and canning establishments.

¹ Prior to 1908 prices are as of Dec. 1.² Compiled from Producers Price Current. Prices 1866-1919 are averages of the high and low weekly quotations of New York potatoes, October-June, converted from dollars per 180 pounds to cents per bushel; beginning 1920 prices reported to the Bureau and weighted by unloads, season September-May.³ Compiled from Commerce and Navigation of the United States, 1866-1917; Foreign Commerce and Navigation of the United States, 1918; Monthly Summary of Foreign Commerce of the United States, June issues, 1919-26, January and June issues, 1927-36, and official records of the Bureau of Foreign and Domestic Commerce.⁴ The difference between total exports (domestic exports plus reexports) and total imports; beginning 1933 domestic exports minus imports for consumption. + indicates net exports and - indicates net imports.⁵ Census acreage incomplete.⁶ Beginning 1933-34 imports for consumption.⁷ Preliminary.

Bureau of Agricultural Economics. Italic figures are census returns.

¹ Preliminary.² 4-year average.

Bureau of Agricultural Economics. Both acreage and production figures refer to the year of harvest. Harvests of the Northern Hemisphere are combined with those of the Southern Hemisphere which immediately follow: Thus, for 1935-36, the crop harvested in the Northern Hemisphere countries in 1935 is combined with the Southern Hemisphere harvest which begins late in 1935 and ends in early 1936.

¹ Crop-movement season covers 19 months, from December through the second following June; i. e., the 1926 season begins in December 1925 and ends June 1927.

² Preliminary beginning January 1936.

³ Includes shipments for emergency relief in 1934, 4,555 cars; in 1935, 884 cars.

Bureau of Agricultural Economics; compiled from daily and monthly reports received by the Bureau from officials and local agents of common carriers throughout the country.

Shipments as shown in carlots include those by boat reduced to carlot basis, 400 to 700 bushels to a carload. Shipments by truck not included.

¹ Preliminary.

Bureau of Agricultural Economics. Based on returns from special price reporters. Monthly prices, by States, weighted by production to obtain a price for the United States; average for the year obtained by weighting State price averages for the crop-marketing season. Data for earlier years in December 1935 issue of Crops and Markets, p. 535.

¹ Less than 10 quotations.² Street sales.³ Less-than-carlot sales.

Bureau of Agricultural Economics.

Compiled from daily market reports from Bureau representatives in the markets. Average prices as shown are based on stock of U. S. No. 1 grade; they are simple averages of daily range of selling prices. In some cases conversions were made from larger to smaller units, or vice versa, in order to obtain comparability. Prices do not include Russet Burbanks, nor California White Rose (beginning June 1936).

In this table the potato season begins in January of 1 year and extends through June of the next year. Thus the \$1.58 in May 1922 on the first line is the price of the last of old crop potatoes, and the \$3.27 in May 1922 on second line is the price of early or new-crop potatoes that month.

¹ Kiln-dried.

Bureau of Agricultural Economics; compiled from daily market reports from Bureau representatives in the markets.

Average prices as shown are based on stock of good merchantable quality and condition; they are simple averages of daily range of selling prices. In some cases conversions have been made from larger to smaller units or vice versa, in order to obtain comparability.

¹ Preliminary.² The reported truck receipts as here shown are estimated to represent approximately the following percentages of total truck receipts in these cities: Boston, 95 percent; New York, 85 percent; Philadelphia, 95 percent; Atlanta, Kansas City, Los Angeles, and San Francisco, each 90 percent. Reports for Philadelphia not available prior to 1936.³ Includes Casaba, Honey Ball, Honey Dew, and Persian melons.⁴ Includes 216 cars of field peas.

Bureau of Agricultural Economics. Compiled from reports made by local dealers and others to the Bureau market-news representatives in these cities.

Bureau of Agricultural Economics. Compiled from reports made by cold-storage establishments.

Beginning with the report for Jan. 1, 1937, these figures on cold-storage holdings of frozen and preserved fruits are segregated into the following classes: Strawberries, blueberries, cherries, and other fruits. Of the total 70,622,000 pounds in cold storage on Jan. 1, about 16 percent were strawberries, 3 percent blueberries, 14 percent cherries, and the remaining 67 percent other fruits.

¹ Shipments from possessions other than Puerto Rico and Hawaii are included with those from foreign countries.

² Sterilized by refrigeration.

³ Imported into Hawaii. Quarantine no. 29 prohibits importation into continental United States.

⁴ The edible root (*Nelumbium nelumbo*) is also well known to the trade as lotus root.

Bureau of Entomology and Plant Quarantine. Figures applying to shipments from Puerto Rico and Hawaii are based on plant quarantine inspections made prior to shipment. Figures on importations are on the basis of notices of arrival required to be submitted by importers of fruits and vegetables subject to plant quarantine regulations.

STATISTICS OF MISCELLANEOUS CROPS

¹ Table includes, besides the ordinary edible beans and limas, the blackeye of California which is identical with the black-eyed pea of the South. Soybeans not included.

² Price of cleaned beans.

³ Farm value of dry, edible beans equals the price of cleaned beans applied to the production of cleaned beans rather than total production.

⁴ Compiled from Chicago Daily Trade Bulletin, pea beans.

⁵ Imports and exports compiled from Monthly Summary of Foreign Commerce of the United States, June issues, 1919-26; January and June issues, 1927-36; and official records of the Bureau of Foreign and Domestic Commerce.

⁶ Bags of 100 pounds.

⁷ Acreage grown alone.

⁸ Imports for consumption, beginning this date.

⁹ Preliminary.

Bureau of Agricultural Economics.

Italic figures are census returns; census figures include all States; other figures, principal producing States only.

Estimates of acreage, yield, production, price to farmers, and farm value previous to 1919, as published in Yearbook for 1933 and earlier years, are not comparable with the revised series in this table.

¹ Excluding soybean, mung, adzuki, broadbean, and horse beans and similar classes not commonly used as edible beans in the United States.

² Preliminary.

³ England and Wales.

⁴ 3-year average, 1927-28 to 1929-30.

⁵ Grown alone through 1933-34; thereafter beans grown with other crops are included as follows: 1934-35, 352,890 bags; 1935-36, 260,921 bags.

⁶ Production in Hokkaido Province, where most of the dry edible bean varieties are grown.

⁷ Unofficial estimate.

⁸ Lima beans.

Bureau of Agricultural Economics: official sources and International Institute of Agriculture, except as otherwise stated. Figures are for the harvesting seasons 1925 to 1936 in the Northern Hemisphere and 1925-26 to 1936-37 in the Southern Hemisphere.

¹ Preliminary.² These figures are for yellow soybeans, which variety constitutes fully 98 percent of the soybean exports, according to Agricultural Commissioner Paul O. Nyhus.³ 3-year average.⁴ Imports for consumption.⁵ Domestic exports of soybeans are not separately reported in Foreign Commerce and Navigation of the United States; if any, included with exports of oilseeds. Soybeans inspected for export began in October 1931, there being for 1933, 15,331,740 pounds; for 1934, 1,137,600 pounds, and for 1935, 94,191,000 pounds.⁶ Does not include refined soybean oil which was not separately reported.⁷ 4-year average.⁸ International Yearbook of Agricultural Statistics.⁹ Soybeans included with cake and meal.

Bureau of Agricultural Economics. Official sources except where otherwise noted.

¹ For "All hay" average for the year obtained by weighting State price averages for the crop-marketing season.

² Preliminary for All hay only.

Bureau of Agricultural Economics. Based on returns from special price reporters. Monthly prices, by States, weighted by production to obtain a price for the United States; yearly price obtained by weighting monthly prices by monthly marketings. Data for earlier years for All Hay, Alfalfa, Clover, and Prairie, in December 1935 issue of Crops and Markets, p. 532.

1936-37 ¹¹ -----	31,500	740	23,310	27.4				

¹ From 1932-33 to 1936-37, season average price.

² Compiled from Monthly Summary of Foreign Commerce of the United States, June issues, 1910-26; January and June issues, 1927-36; and official records of the Bureau of Foreign and Domestic Commerce.

³ Total exports (domestic plus foreign) minus total imports; beginning 1933-34 domestic exports minus imports for consumption.

⁴ 1920-21 to 1931-32 represent hops used to make cereal beverages containing less than 0.5 percent of alcohol by volume; 1932-33 includes 807,057 pounds of hops used to make cereal beverages containing less than 0.5 percent of alcohol by volume and 6,900,263 pounds fermented malt liquor containing not more than 3.2 percent of alcohol by weight; 1933-34 to date, used for fermented liquor. Records of the Bureau of Internal Revenue, 1910-11 to 1925-26, and 1933-34 to date; annual reports of the Commissioner of Prohibition, 1926-27 to 1929-30; and Commissioner of Industrial Alcohol, 1930-31 to 1932-33.

⁵ Less than 500 pounds.

⁶ Not including 57,936 pounds in 1924, 71,508 pounds in 1925, 960 pounds in 1926, and 6,294 pounds in 1927 used in the manufacture of distilled spirits.

⁷ Includes hop extract and lupulin beginning 1931-32.

⁸ Net imports.

⁹ Beginning 1933-34 imports for consumption.

¹⁰ Includes 802,000 pounds in 1934-35 and 5,436,000 pounds in 1935-36 not harvested on account of labor shortage and market conditions. Prices are computed on the harvested crop.

¹¹ Preliminary.

¹ Farmers signing acreage-restriction contracts, as most commercial producers did, were eligible to receive in addition, from the Department of Agriculture, 0.4 cent per pound for the quantity of peanuts harvested in 1934, or not less than \$2 per acre of the allotted peanut acreage on a farm covered by an A. A. A. contract.

Bureau of Agricultural Economics.

Prices compiled from weekly market news reports on peanuts issued by the Bureau. In the Virginia-North Carolina section peanut growers usually sell by eighth fractions of a cent per pound; in the Southeastern section sales are on a per-ton basis, and in the Southwestern States sales are on a 30-pound bushel basis. For the 2 latter areas, conversions have been made to a per-pound basis.

TABLE 320.—*Peanuts: Yearly average price per pound of cleaned and shelled peanuts for prompt shipment, f. o. b. important shipping points, November 1924–October 1936, by approximate crop years*¹VIRGINIA-NORTH CAROLINA SECTION: VIRGINIA, NORTH CAROLINA, AND TENNESSEE²

¹ Crop year extends from November through next October in the Virginia-North Carolina section; farther south it begins earlier.² Shipping points in 1935-36 season: Virginia: Boykins, Courtland, Disputanta, Emporia, Franklin, Petersburg, Stony Creek, Suffolk, Wakefield, Waverly, Zuni. North Carolina: Ahoskie, Edenton, Enfield, Lewiston, Scotland Neck, Tarboro, Williamston, Wilmington. Tennessee: Johnsonville and Nashville.³ Shipping points in 1935-36 season: Georgia: Albany, Americus, Ashburn, Bainbridge, Blakely, Cairo, Camilla, Coleman, Cordele, Dawson, Donaldsonville, Fitzgerald, Fort Gaines, Leary, Macon, Moultrie, Pelham, Shellman, Tifton, Valdosta. Alabama: Andalusia, Dothan, Elba, Enterprise, Eufaula, Headland, Montgomery, New Brockton, Ozark, Samson, Troy. Florida: Greenwood, High Springs, Malone, Marianna.⁴ Shipping points in 1935-36 season: Texas: Abilene, Carbon, DeLeon, Denison, Dublin, Fort Worth, Houston, San Antonio. Oklahoma: Durant, Hugo.⁵ Prices from Oct. 1, 1934, to Jan. 6, 1936, include processing tax of 1.05 cents per pound on cleaned peanuts and 1.5 cents per pound on shelled peanuts.

Bureau of Agricultural Economics. Compiled from weekly market news reports issued by the Bureau. Shellers and cleaners usually sell peanuts in eighth fractions of a cent per pound; more rarely, in decimal fractions. Prices in this table are based on returns from cleaners, shellers, and brokers, and are straight averages, not weighted in any way.

¹ Preliminary.² International Yearbook of Agricultural Statistics.³ Not shown prior to 1932; included in data for China. ⁴ Java and Madura only. ⁵ 4-year average.

Bureau of Agricultural Economics. Official sources except where otherwise noted. Includes shelled and unshelled, assuming the peanuts to be unshelled unless otherwise stated. When shelled nuts were reported they have been reduced to terms of unshelled at the ratio of 3 pounds unshelled to 2 pounds of shelled.

¹ Figures for 1900–1919 are tentatively revised estimates of the Bureau of Agricultural Economics.

² Obtained by subtracting the estimates of "milk cows on farms" shown in table 399 from the estimates of "all cattle on farms" shown in this table.

³ Data for 1900–1925 are an old series adjusted on basis average relationship between the old and new series for 1926–28. Old series was weighted averages of prices by age groups only and was shown in 1928 Yearbook. The conversion factor was 0.9466 (base is old series). Data for 1926–37 are a new series, referred to above, of average values by age and sex classification, weighted by numbers in each class.

⁴ Italic figures are from the census. Census dates were June 1, 1900; Apr. 15, 1910; Jan. 1, 1920 and 1925; Apr. 1, 1930; Jan. 1, 1935. 1900, 1910, and 1930 include spring-born calves.

⁵ Preliminary.

Bureau of Agricultural Economics.

¹ Preliminary.² The old derived farm values per head were used for the States.³ Sum of total value of subgroups (classified by age and sex), divided by total number and rounded to nearest dime for States. Division and United States averages not rounded. State figures are new weighted value series not comparable to State figures previously published for the years prior to 1925.

Bureau of Agricultural Economics.

¹ Rounded totals of the complete figures.² Includes purchases for Federal Surplus Relief Corporation from June 6, 1934, to Feb. 7, 1935.

Bureau of Agricultural Economics. Compiled from data of the livestock and meat reporting service of the Bureau.

Receipts, 1915-26 are available in 1927 Yearbook, table 337.

(Notes for table 335—Continued)

³ Average of 1926 estimate for 96 percent of municipalities and the final figures of the Apr. 26, 1930, census. This census is the first complete census of numbers in Mexico and is therefore not strictly comparable with earlier estimates.⁴ Nearest census. The census years in most countries were 1920 and 1930, only a few countries having taken a census in intervening years or later than 1930.⁵ Year 1918.⁶ Data for 1930 or nearest year.⁷ Unofficial.⁸ Countries reporting as of December have been considered as of Jan. 1 of following year.⁹ Census.¹⁰ These totals include interpolations for a few countries not reporting each year and rough estimates for some others.¹¹ Buffaloes included.¹² Jan. 1, 1923.¹³ In rural communities only.¹⁴ The census in the spring of 1933 was 3,569,000 compared with 3,660,000 in May 1929.¹⁵ Census, Jan. 1, 1926.¹⁶ Estimate of total number based on number in rural communities only as compared with preceding year.¹⁷ November.¹⁸ Year 1928.¹⁹ Including unofficial estimate of 690,000 buffaloes.²⁰ Estimate based on official figures in 1920 for 20 Provinces, which supported 63 percent of the cattle in China in 1914. No data available in 1920 for such important Provinces as Hupeh with 1,898,000 in 1914, Hunan with 2,192,000, Szechuan with 3,009,114, Kwantung with 2,288,000, and Kwangsi with 1,527,000.²¹ Estimate based on official figures in 1932 or 1933 for 22 Provinces, which supported 97 percent of the cattle in China in 1914. The official estimate excluding Turkistan and Inner Mongolia for 1932 or 1933 was 22,333,000. Estimates for this territory and for Manchuria included with China in this table.²² Comparable totals for number of countries indicated.²³ Estimated totals for continents are as follows in millions of head for the 5-year average, 1909-13: North America, Central America, and West Indies, 74.9; South America, 80.3; Europe, excluding Union of Soviet Socialist Republics, 103.3; Africa, 33.8; Asia, excluding Union of Soviet Socialist Republics, 195.3; Oceania, 13.8; world, including Union of Soviet Socialist Republics, 562.

Bureau of Agricultural Economics, compiled from reports of U. S. Government representatives abroad, original official sources, and the International Institute of Agriculture, unless otherwise stated. Figures in parentheses interpolated.

Bureau of Agricultural Economics. Based on reports of special price reporters. Monthly prices of beef cattle, by States, weighted by number of cattle Jan. 1 to obtain a price for the United States; monthly price of veal calves, by States, weighted by number of milk cows Jan. 1 to obtain a price for the United States; yearly price obtained by weighting monthly prices by Federal inspected slaughter.

Data for earlier years in February 1936 issue of Crops and Markets, Beef Cattle, p. 37, and Veal Calves, p. 39.

¹ Western steers not included.

Bureau of Agricultural Economics.

Beef-steer prices, monthly and yearly, are the weighted average price of all grades of beef steers sold out of first hands at Chicago. Veal-calf prices from the livestock and meat-reporting service of the Bureau on Medium to Choice grades prior to July 1, 1927, and subsequent prices on Good and Choice grades.

Earlier data in 1932 Yearbook, table 321.

Preliminary.

Bureau of Agricultural Economics. The figures on income as shown in tables 483 and 484 are computed from the data shown in this table. The difference between gross income and value of production arises from the fact that in computing value of production allowance is made for changes in inventory numbers between the beginning and end of the year while in computing income these changes are not used. Gross income is the sum of "cash income from cattle, calves, beef, and veal sold" and "value of amount consumed on farms."

¹ Preliminary.

Bureau of Agricultural Economics. Compiled in original currencies and units as follows: Argentina-Boletín Mensual de Estadística Agropecuaria, Buenos Aires, monthly. Averages of daily quotations. (For period June-December 1930, prices omitted from above publication; data obtained from weekly publication Mercado de Ganado y Carnes, Buenos Aires. Monthly prices for this period are averages of weekly averages.) Prior to May 1934 description did not include the term "special." Winnipeg-Monthly Bulletin of Agricultural Statistics, Ottawa, for monthly quotations (described only as monthly average prices); The Canada Year Book, Ottawa, for yearly quotations (described only as yearly average prices but apparently weighted.)

Prices converted to dollars per 100 pounds at current monthly rates of exchange as reported by the Federal Reserve Board. (Canadian series converted at par prior to September 1931.) Annual averages for Argentina have been compiled from monthly prices, whereas those for Canada have been converted from Canadian currency at annual exchange rates.

¹ Preliminary.² Year ended June 30.³ The import figures include canned beef and veal as taken from reports of the Bureau of Animal Industry.⁴ 4-year average.⁵ Average figures are general imports; beginning 1933 special trade used.⁶ Includes only oleomargarine, tallow, and artificial butter; meat imports into Italy are not separated as to kinds, although a large quantity of unclassified fresh and frozen meat is undoubtedly beef.

Bureau of Agricultural Economics. Official sources. This table includes fresh, pickled or salted, and canned beef, tallow, oleo oil, oleo stock, oleo stearin, and oleomargarine.

¹ Figures for 1900–1919 are tentatively revised estimates of the Bureau of Agricultural Economics.² Data for 1900–1925 are an old series for all hogs as reported, adjusted on basis average relationship between the new and the old series for 1926–28. Old series was shown in 1928 Yearbook. Conversion factor was 1.057 (base was old series). Data for 1926–37 are a new series referred to above, of average values by age and sex classification weighted by numbers in each class.³ Italic figures are from the census. Census dates were June 1, 1900; Apr. 15, 1910; Jan. 1, 1920, and 1925; Apr. 1, 1930; Jan. 1, 1935. 1900, 1910, and 1930 include spring-born pigs.⁴ Preliminary.

Bureau of Agricultural Economics.

¹ Preliminary.² The old derived farm values per head were used for the States.³ Sum of total value of subgroups (classified by age and sex), divided by total number and any value per head under \$5 rounded to nearest nickel for States. Division and United States averages not rounded. State figures are new weighted value series, not comparable to State figures previously published for the years prior to 1925.

Bureau of Agricultural Economics.

¹ Average for 5-year period if available, otherwise for any year or years within that period unless otherwise stated.

² Number on Jan. 1, 1936, was 42,837,000 head.

³ Incomplete.

⁴ Average of 1926 estimate for 96 percent of municipalities and the final figures of the 1930 census.

⁵ Nearest census. The census years in most countries were 1920 and 1930, only a few countries having taken a census in intervening years or later than 1930.

⁶ Year 1930 or nearest year.

⁷ These totals include interpolations for a few countries not reporting each year and rough estimates for some others.

⁸ Jan. 1, 1923 census.

⁹ Rural communities only.

¹⁰ June.

¹¹ June 20.

¹² Unofficial.

¹³ Apr. 18.

¹⁴ Estimates of countries reporting as of December are considered as of Jan. 1, of following year, i. e., the figures for the number of hogs in France as of Dec. 31, 1930, have been placed in 1931 column, etc.

¹⁵ Census 1925.

¹⁶ November.

¹⁷ Includes French Sudan.

¹⁸ Estimate based on official figures for 1920 for 20 Provinces which supported over 50 percent of the number in China in 1914.

¹⁹ Estimate based on official figures for 1932 or 1933 for 22 Provinces which supported over 99 percent of the number in China in 1914. The official estimate excluding Turkistan and Inner Mongolia in 1932 or 1933 was 94,595,000. Estimates for this territory and for Manchuria included with China in this table.

²⁰ Comparable totals for number of countries indicated in parentheses.

²¹ Estimated world production for the 5 years 1909-13 was as follows (in thousands of head): North America, Central America, and West Indies, 59,700; South America, 23,500; Europe, excluding Union of Soviet Socialist Republics, 71,800; Africa, 2,500; Asia, excluding Union of Soviet Socialist Republics, 86,200; Oceania, 1,400; World including Union of Soviet Socialist Republics, 266,000.

Bureau of Agricultural Economics; official sources and International Institute of Agriculture unless otherwise stated. Figures in parentheses interpolated. For later figures (1936) for a few countries see current monthly issue of The Hog Situation and Foreign Crops and Markets.

Bureau of Agricultural Economics. Compiled from reports of packer and shipper purchases; such purchases do not include pigs, boars, stags, extremely rough sows, or cripples. These weighted prices do not include processing tax. Tax of 50 cents per 100 pounds was imposed from Nov. 5 to Nov. 30, 1933; \$1 from Dec. 1, 1933, to Jan. 31, 1934; \$1.50 from Feb. 1 to Feb. 28; and \$2.25 from Mar. 1, 1934, to Jan. 6, 1936. Data for 1901-27 are available in 1932 Yearbook, table 336.

¹ Average January-August; classification changed September 1929.² Preliminary.

Bureau of Agricultural Economics. Compiled in Canadian dollars per 100 pounds as follows: January 1927-December 1935, Livestock and Animal Products Statistics, Ottawa, annual; January 1936 to date, Prices and Price Indexes, Ottawa, monthly. Method of obtaining the monthly average prices not explained. Annual averages are weighted. Prices described as follows: January 1927-August 1929, thick smooth; September 1929 to date, bacon. Hog prices at Toronto are on a "weighted off cars" basis.

Price series converted to United States dollars per 100 pounds at current monthly rates of exchange (annual averages converted at annual exchange rates).

¹ Benefit payments not included in production and income data.

Bureau of Agricultural Economics; preliminary. The figures on income as shown in tables 483 and 484 are computed from the data shown in this table. The difference between gross income and value of production arises from the fact that in computing value of production, allowance is made for changes in inventory numbers at the beginning and end of the year, while in computing income these changes are not used. Gross income is the sum of "cash income from hogs and pork sold" and "value of amount consumed on farms".

TABLE 361.—*Hogs: Slaughter in specified countries, 1927-36*

¹ Lard includes all prime steam, kettle-rendered, neutral, and other pure lards. It does not include lard substitutes nor compounds.

² Stocks of meat purchased under the emergency hog-control program by Federal Surplus Relief Corporation are not included in these figures for year 1934 and Jan. 1 and Feb. 1, 1935.

³ Pickled pork includes sweet-pickled, plain-brine, and barreled pork.

Bureau of Agricultural Economics. Compiled from reports made by cold-storage warehouses and meat-packing establishments. Data for earlier years in 1928 Yearbook, table 390.

Total countries reporting all periods:								
To 1934 (58) ²⁰		476,945	558,667	539,879	515,788	507,933	492,589	
To 1935 (34) ²⁰		419,150	404,023	465,627	442,211	433,615	420,049	436,314
Estimated world total including Union of Soviet Socialist Republics ^{8 21}		636,700	735,600					

¹ Average for 5-year period, if available; otherwise, for any year or years within this period except as otherwise stated.

² Incomplete.

³ Average of 1926 estimate for 96 percent of the municipalities and the final figure of the Apr. 26, 1936, census. This is the first complete census for all Mexico, including cities and towns, and, therefore, is not strictly comparable with earlier figures.

⁴ Census for year indicated or nearest census. The census years in most countries were 1920 and 1930, only a few countries having taken a census in intervening years or later than 1930.

⁵ These totals include countries with less than 100,000; interpolations for a few countries not reporting each year, and rough estimates for some others.

⁶ Data for 1930 or nearest year.

⁷ Unofficial.

⁸ Estimates for countries reporting as of Dec. 31 have been considered as of Jan. 1 of following year; i. e., figures for numbers of sheep in France as of Dec. 31, 1930, have been placed in 1931 column, etc.

⁹ Census 1920.

¹⁰ Jan. 1, 1923.

¹¹ In rural communities only.

¹² Not strictly comparable with earlier figures as taken on different basis.

¹³ Years 1921-28 from Livestock Industry in the Soviet Union. Later figures from Pravda, Jan. 28, 1934 and Dec. 7, 1935. Estimate of sheep numbers 1929-34 based on percentage of sheep to total sheep and goats in earlier years as they were not given separately.

¹⁴ Goats included.

¹⁵ Estimate based on change in sheep numbers in June compared with preceding June.

¹⁶ Number taxed.

¹⁷ Estimates for India not strictly comparable 1 year with another as not always for identical territory.

¹⁸ Estimate based on increases in 1920 in 20 Provinces which supported 80 percent of total number in China in 1914.

¹⁹ Estimate based on official estimate for 1932 or 1933 published in the Chinese Economic Bulletin for 22 Provinces which supported 77 percent of total in 1914. The official estimate excluding Turkestan and Inner Mongolia for 1932 or 1933 was 19,995,000. Estimates for this territory and for Manchuria included with China in this table.

²⁰ Comparable totals for numbers of countries indicated.

²¹ Comparable estimated world totals by countries were as follows in millions of head: 1909-13, North America, Central America, and West Indies, 49.6; South America, 93.2; Europe (excluding Union of Soviet Socialist Republics), 134.4; Africa, 71.2; Asia (excluding Union of Soviet Socialist Republics), 115.3; Oceania, 114.7; estimated world total, including Union of Soviet Socialist Republics, 691.6.

Bureau of Agricultural Economics; compiled from official sources and the International Institute of Agriculture unless otherwise stated. Figures in parentheses are interpolated. For later figures for a few countries see World Wool Prospects, November 1936 and current monthly issues of the Wool Situation.

Bureau of Agricultural Economics. Based on returns from special price reporters. Monthly prices, by States, weighted by number of sheep including lambs Jan. 1, to obtain a price for the United States; yearly price obtained by weighting monthly prices by receipts at principal markets. Data for earlier years in February 1936 issue of Crops and Markets, p. 44.

TABLE 377.—*Sheep and lambs: Annual slaughter under Federal inspection, 1907-36, estimated equivalent of Federal inspection, 1900-1906, and estimated total slaughter (including farm) in United States, 1900-1936*¹

Bureau of Agricultural Economics; preliminary. The figures on income as shown in tables 483 and 484 are computed from the data shown in this table. The difference between gross income and value of production arises from the fact that in computing value of production allowance is made for changes in inventory numbers between the beginning and end of the year while in computing income these changes are not used. Gross income is the sum of "cash income from sheep, lambs, mutton, and lamb sold" and "value of amount consumed on farms."

¹ "Hair of angora goat, alpaca, and other like animals" included in exports for all years, and in import and reexports prior to 1914.² In computing these figures, stocks not taken into consideration.³ Exports for fiscal year ended June 30.⁴ No transactions.⁵ Wool not finer than 40's for the years 1930-35 has been added to combing and clothing import figure (deducted from carpet wool as reported by Department of Commerce), thus making entire series comparable.⁶ Imports for consumption, beginning 1934.⁷ Preliminary. Revised production data for 1936 can be obtained from the Bureau.

Bureau of Agricultural Economics. Production figures, 1910-13, from the National Association of Wool Manufacturers; beginning 1914, from the Bureau; imports and exports from Foreign Commerce and Navigation of the United States.

¹ Include fleeces taken at commercial feeding plants. California figures include some fleeces taken from early lambs.

² In States where sheep are shorn twice a year, principally Texas and California, this figure covers wool per head of sheep shorn and not weight per fleece.

³ Preliminary. Revised data for 1936 can be had from the Bureau on request.

Bureau of Agricultural Economics.

¹ Preliminary.⁵ Estimates based on sheep numbers at date nearest shearing and other available data.⁷ Estimates supplied by United States Department of Agriculture representative.¹² Estimates for Asiatic countries, rough approximations only.¹³ Estimates published by the Banque Centrale de la Turquie. These estimates supercede those published formerly which were based on exports alone.¹⁴ Totals subject to revision. Few countries publish official estimates of wool production. In the absence of official figures for many countries various estimates have been used. Some have been furnished by United States Government representatives abroad and other have been based on reports of sheep numbers, average fleece weights, and any other available data. For some principal exporting countries the figures are seasonal exports alone, or estimates derived from exports, carry-over, and domestic consumption. In the case of most Asiatic countries the figures are rough commercial estimates.¹⁵ Estimate based on sheep numbers and average yield as derived from official estimates for recent years.¹⁶ Unofficial estimate based on sheep numbers in 1932. Owing to poor marketing conditions in recent years exports of sheep's wool not reliable index of production.

Bureau of Agricultural Economics.

This table includes wool shorn during the calendar year in the Northern Hemisphere and that shorn during the season beginning July 1 or Oct. 1 of the given calendar year in the Southern Hemisphere. Pulled wool included for most important countries at its grease equivalent. Figures in parentheses interpolated or carried forward. See World Wool Prospects, November 1936, for table showing all countries, and current issues of the Wool Situation for latest estimates.

¹ The changes in relationship between wool consumption on a scoured basis and on a greasy basis during the period from 1918 to 1936 are due largely to the changes in the proportion of foreign wool, which is light shrinking, in the total consumption. A greasy shorn basis denotes shorn wool reported "greasy", plus pulled wool reported "greasy" raised to a greasy shorn basis, and shorn and pulled wool reported "scoured" raised to a greasy shorn basis, conversion factors varying with origin and grade.

² All percentages are based on consumption on a greasy shorn basis. Percentages for 1922 to 1934 are based on consumption figures for 75 to 80 percent of the industry. Percentages for 1935 and 1936 are based on figures for the entire industry.

³ Grades 58's, 60's and 64's, 70's, 80's.

⁴ Grades 36's to 56's inclusive.

⁵ Not compiled by grade and origin on a greasy shorn basis.

Bureau of Agricultural Economics. Compiled from wool consumption reports of the Bureau of the Census.

¹ Preliminary.

Bureau of Agricultural Economics. Based on returns from special price reporters. Monthly prices, by States, weighted by number of sheep including lambs, Jan. 1, to obtain a price for the United States. Average for the year obtained by weighting State price averages for the calendar year. Data for earlier years in February 1936 issue of Crops and Markets, p. 44.

¹ Preliminary.² International Yearbook of Agricultural Statistics.³ Not shown prior to 1932; included in data for China.⁴ The 1925-29 average is for the years beginning Mar. 22; annual figures are for year ended June 21.⁵ Excess of reexports over imports.⁶ 4-year average.

Bureau of Agricultural Economics. Official sources except where otherwise noted. Wool in this table includes: washed, unwashed, scoured, pulled wool, slips, also hair—camel's mohair, angora goat, cashmere goat, and alpaca. The following items have been considered as not within this classification: Carded, combed, dyed wool, flecks; sheep, lamb and goat skins with hair on, mill waste, noils, and tops.

TABLE 390.—*Goats and mohair: Estimates of goats clipped, mohair produced, and average clip per goat (principal producing States), 1933-35*

¹ Figures for 1900 to 1919 are tentatively revised estimates of the Bureau of Agricultural Economics for numbers on Jan. 1. Figures from 1920 to 1936 are revised estimates made in 1937 based upon study of 1935 census report. Figures for 1900-1937 relate to cows and heifers 2 years old and over Jan. 1, kept for milk.

² Values for 1900-1925 are an old series of values of milk cows adjusted to relate to milk cows and heifers, 2 years old and over on basis of relationship between the 2 series from 1926 to 1928. Conversion factor was 0.955 (base is old series). Data for 1926-37 are values relating to milk cows and heifers 2 years old and over.

³ Italic figures are from the census. Figures for census years 1880 and 1890 represent milk cows; 1900, cows kept for milk, 2 years old and over; 1910, cows and heifers kept for milk, born before Jan. 1, 1909 (15½ months and over); 1920, dairy cattle 2 years old and over kept mainly for milk production; 1925, 1930, and 1935, number of cows milked in 1924, 1929, and 1934. Census dates were June 1 from 1880 to 1900; Apr. 15, 1910; Jan. 1, 1920 and 1925; Apr. 1, 1930; Jan. 1, 1935.

⁴ Preliminary.

Average.....	316	7,859	162	41	34	75	87	2.16	.24	.95

¹ California records were not included, because they gave only production of milk and butterfat. Including the California records the average production was as follows: Milk, 7,977 pounds; butterfat, 322 pounds.² Calculated averages of the class intervals. The first line includes cows producing no milk or butterfat; the second line those producing less than 25 pounds of butterfat; the third line, those producing 25 to 74 pounds; the fourth line, those producing 75 to 124 pounds, etc.

¹ Modified accredited counties are those in which tuberculosis does not exist among more than 0.5 percent of the cattle, as determined by official tuberculin testing, and from which all reactors to the test have been removed.

² The figures in these columns represent net increases at the close of each year.

³ Represents decrease from figures for previous year.

Bureau of Animal Industry.

Current data on tuberculosis-eradication work, including progress by States and counties, may be obtained from Bureau of Animal Industry. Data for earlier years in 1928 Yearbook, table 448.

¹ Estimated average number of milk cows on farms during year. The estimates exclude heifers not yet fresh, but include some cows which had calves running with them much of the year.

² Excluding milk spilled or wasted on farms and milk sucked by calves.

³ Preliminary. Partially adjusted to census enumeration of all cows on farms Jan. 1, 1935. Subject to further revision when results of enumeration of cows milked, milk production and farm butter production in 1934 are available.

TABLE 408.—*Milk and butterfat produced and milk used for each purpose on farms, 1934*¹

State and division	Milk cows on farms		Estimated production per milk cow during year ¹		Total production on farms ²		Disposition of milk						
	Thou- sands	Lb.	Lb.	Per- cent	Mil- lion lb.	Mil- lion lb.	Used as whole milk or cream on farms where produced	Used for making butter on farms	Whole milk fed to calves	Milk skimmed or separated for sale of butterfat	Retailled by producers ³	Milk sold at whole-sale ⁴

¹ Preliminary, pending revisions based on the results of the 1935 census enumeration of cows milked, milk production, and farm butter production. Not strictly comparable with table 407 which has been partially revised toward results of the 1935 census enumeration of all cows on farms.

² These estimates exclude milk sucked by calves, milk spilled or lost up to the time it is measured, skimmed, or delivered by farmers, and milk produced by cows not on farms.

³ Approximations based chiefly on the population in small towns and rural areas where most families purchase their milk supply directly from local farmers. Estimates include milk equivalent of cream.

⁴ Estimates include milk delivered to creameries, condensaries, cheese factories, and market-milk receiving stations, but exclude market milk sold to other farmers for local retail delivery.

⁵ As computed by counties.

Bureau of Agricultural Economics.

1935.....	17.1	5.2	16.7	1.8	36.7	(1)

¹ These data now refer to consumption in continental United States only, which explains some small differences as compared with data previously published.

² Includes both farm and factory-made butter. These estimates include some butter used in other products such as ice cream.

³ Includes all kinds of cheese except cottage, pot, and bakers'.

⁴ Includes some condensed and evaporated milk used in other products, also includes both whole and skim-milk product. Not corrected for unclassified imports.

⁵ Milk and the milk equivalent of cream consumed per capita by that part of the population not on rural farms. These estimates include some milk and cream used in such products as ice cream and supersede estimates previously issued.

⁶ Based on estimates of milk production on farms and elsewhere, with milk fed to calves deducted in calculating per capita consumption.

⁷ Data for 1935 under revision.

Bureau of Agricultural Economics. Consumption of butter, cheese, evaporated milk, condensed milk, and milk equivalent of all dairy products is calculated from production, foreign trade, and domestic stocks. Milk used in cities and villages is calculated from board of health reports.

¹ Included in creamery butter.

² Unsweetened condensed milk (plain condensed) was classified as "Evaporated milk (unsweetened), bulk goods", in previous years.

³ Production in commercial ice-cream factories only.

Bureau of Agricultural Economics; compiled from reports of factories made direct to the Bureau.

Figures beginning with the year 1929 are the most complete since these reports were inaugurated in 1918. Some allowance, therefore, should be made for this when comparing production since 1929 with that of previous years.

¹ Preliminary.

Bureau of Agricultural Economics. Quotations include some purchases other than for the manufacture of butter. Based on reports of special price reporters. Monthly prices, by States, prior to June 1932, weighted by number of milk cows Jan. 1 to obtain a price for the United States. Beginning in June 1932 State prices weighted by volume of cream sold as butterfat, 1929 census. Yearly prices, by States, weighted by estimated volume of cream sold, 1929-36, to obtain yearly prices for the United States. Prior to 1929 yearly prices obtained by weighting monthly United States averages by normal marketings. Data for earlier years in February 1936 issue of Crops and Markets, p. 45.

Bureau of Agricultural Economics. Compiled from reports of factories made direct to the Bureau. Figures beginning with the year 1929 are the most complete since these reports were inaugurated in 1918. Some allowance, therefore, should be made for this when comparing production since 1929 with that of previous years. Data for earlier years in 1928 Yearbook, table 461.

TABLE 422.—*Creamery butter¹ production in factories, by States, average 1929–33 annual 1934 and 1935*

Bureau of Agricultural Economics. Compiled in original currencies and units as follows: Denmark—Danish Butter Journal (Smor Tidende), Copenhagen, weekly. Average of official quotations as fixed each Thursday by 2 committees, representing dairy and commercial interests, respectively. New Zealand—1927-30, New Zealand Statistical Report, Wellington, annual. 1931-36, monthly reports of Government Statistician at Wellington, received by letter. Average of wholesale prices on 1st and 15th of each month through February 1933. Beginning March 1933, prices are for 15th of month. The series is an average of prices at the following centers: Auckland, Wellington, Christchurch, and Dunedin.

Prices converted to cents per pound at current monthly rates of exchange as reported by the Federal Reserve Board (beginning March 1933 New Zealand prices converted at exchange rates for 15th of month). Annual averages compiled from monthly prices carried to 2 decimals. For Danish butter prices for years 1882-1926, see the 1923 Yearbook, table 450, and 1928 Yearbook, table 467.

Bureau of Agricultural Economics. Compiled from reports of factories made direct to the Bureau. Figures beginning with the year 1929 are the most complete since these reports were inaugurated in 1918. Some allowance, therefore, should be made for this when comparing production since 1929 with that of previous years. Data for earlier years in 1928 Yearbook, table 468.

¹ Quantities given are net weight.² The term "American cheese" is intended to cover only those varieties known as "twins", "flats", "daisies", "Cheddars", "longhorns", and "square prints." It does not, therefore, include all kinds of cheese made in the United States.

Bureau of Agricultural Economics; compiled from reports made by cold-storage establishments.

Changes in these tables made due to transference of current trading stocks to cold-storage stocks from Jan. 1, 1927, to Dec. 1, 1931. Data for earlier years in 1928 Yearbook, table 472.

¹ Production reports to the Bureau of Internal Revenue are required by law and are therefore considered to be more accurate than reports to the Bureau of Agricultural Economics, which are voluntary, but the latter are useful because they are broken down into special classifications.

² Preliminary.

Bureau of Agricultural Economics. Data of this Bureau are from reports of manufacturers to the Cold-Storage Reports Section. Internal Revenue data are from annual reports of the Commissioner of that Bureau.

TABLE 441.—*Oleomargarine: Production, withdrawn for export, stocks, and withdrawn for consumption, years beginning July, 1926-35*

Bureau of Agricultural Economics. Compiled from annual reports of the Commissioner of Internal Revenue.

Withdrawn for export: The Bureau of Internal Revenue believes that withdrawn-for-export data more accurately measure exports than the exports reported by the Bureau of Foreign and Domestic Commerce. No attempt is made by the 2 Bureaus to coordinate the 2 sets of figures. All oleomargarine withdrawn for export free of tax must be reported to the Bureau of Internal Revenue after having reached destination or the tax will be collected. Reported exports may cover various classifications of material.

Withdrawn for consumption: Figures are for quantity withdrawn for general use, tax paid (10 cents per pound on colored and one-fourth cent on uncolored), plus withdrawn free for use of the United States in prisons and other Federal institutions.

Per capita consumption computed from unrounded figures.

¹ These totals include the following items in addition to those shown separately above: Tallow, 1926-30; whale oil, 1931-32; mustard oil 1926-32; unnamed oil, 1934 and 1935, rape oil and ouricury in 1936.

² Not over 500 pounds.

³ Includes 1,000 pounds for November 1934 and 40,000 pounds for February 1935, of vegetable oil (unnamed). Less than 500 pounds is reported for July, October, and December 1934, and April 1935. Arbitrarily considered domestic.

⁴ Includes 8,786 pounds of rape oil in April 1936, and 442 pounds of ouricuri, September-December 1936.

Bureau of Agricultural Economics. Compiled from reports of the Commissioner of Internal Revenue.

TABLE 443.—*Oleomargarine: Percentage contributed by important items to the weight of fats and oils (excluding milk) used in manufacture of oleomargarine, year beginning July, 1926-35, and calendar years, 1930-36*¹

Year beginning July	Animal fats and oils					Vegetable oils			Other fats and oils ²

1935.....	6	1	1	1	(³)	56	32	1	2
1936.....	6	1	1	1	-----	46	33	1	11

¹ Percentages computed on unrounded figures and on total weight of fats and oils, exclusive of milk, salt, and miscellaneous materials. Percentages of other fats and oils adjusted to equal 100 percent.

² Includes tallow edible, and the following oils—corn, soybean (4 percent in 1936), mustard, palm, and sesame, also palm-kernal, sunflower, unnamed oil in 1934-35, babassu 1935-36 (5 percent in 1936), rape, and ricinuric in 1936.

³ Less than 0.5 percent.

Bureau of Agricultural Economics. Based on figures in table 442.

¹ Preliminary.

Bureau of Agricultural Economics. Based on returns from special price reporters. Monthly prices, by States, weighted by census production in 1919 to obtain the United States averages from 1925 through May 1932, and by 1929 census sales thereafter. Yearly price obtained by weighting annual State averages by sales in each State. Data for earlier years in February 1936 issue of Crops and Markets, p. 46.

Bureau of Agricultural Economics. Based on returns from special price reporters. Monthly prices, by States, weighted by census production in 1919 to obtain the United States averages from 1927 to October 1932 and by 1929 census sales thereafter. Data for earlier years in February 1936 issue of Crops and Markets, p. 46.

¹ Preliminary.

Bureau of Agricultural Economics. Based on returns from special price reporters. Monthly prices, by States, weighted by Census production 1919 to obtain the United States averages from 1925 through May 1932, and by 1929 census sales thereafter. Yearly prices obtained by weighting annual State averages by sales in each State. Data for earlier years in February 1936 issue of Crops and Markets, p. 46.

¹ Excludes forest products.

² Excludes forest products but includes rubber, unmanufactured (and similar gums), now mostly a plantation product which comprises balata, guayule, gutta-joolatong or jelutong or pontianak, gutta-percha, India rubber, crude, and India rubber scrap or refuse, fit only for remanufacture.

³ Excludes distilled liquors, classified as nonagricultural, which comprise: Brandy, rum, bourbon whisky, rye whisky, cordials, liqueurs, etc., all other distilled liquors.

⁴ Excess of exports.

⁵ Excess of agricultural imports.

⁶ Imports for consumption beginning 1933-34.

⁷ Preliminary.

Bureau of Agricultural Economics. This table supersedes table 421 in Agricultural Statistics, 1936. (See footnote 3, above.)

In the statistics of foreign commerce of the United States the Philippine Islands and the Virgin Islands are treated as foreign countries; beginning January 1935, the Virgin Islands are considered as a noncontiguous territory. The statistics of foreign commerce include the trade of the customs districts of Alaska, Hawaii, Puerto Rico, and Virgin Islands (from 1935 on) with foreign countries, but do not include the trade of these Territories with the United States.

¹ Includes bacon, hams, shoulders, and sides.

² Includes stems, trimmings, etc.

³ Discontinued after 1934-35.

Bureau of Agricultural Economics. Computations are based on the gross exports of 44 of the most important farm products. The index numbers were calculated as follows: Quantities of various commodities exported each year were multiplied by the average yearly export prices of these commodities for 1909-10 to 1913-14. The sum of these annual values was then divided by the average yearly value of exports from 1909-10 to 1913-14 to obtain the index.

TABLE 467.—Exports and imports of selected forest products, 1909-10 to 1935-36

Year beginning July—	Domestic exports					Imports				
	Lumber		Rosin	Spirits of tur- pen- tine	Tim- ber, sawed	Cam- phor, crude	Lumber		Shellac	Wood pulp

⁴ Preliminary.⁷ Converted to boxes of 78 pounds.⁸ Given in value only prior to 1922-23.⁹ Included with Starch prior to 1917-18.¹⁰ Jan. to June.¹¹ Includes barley flour 1919-22. Barley flour not separately reported prior to 1919 nor since 1922.¹² Includes flour exports made from foreign wheat milled in bond.¹³ Includes stems, trimmings, and scrap tobacco.¹⁴ Includes maple sugar, if any, 1918-19 to 1934-35.¹⁵ Less than 500 bushels.

Bureau of Agricultural Economics; compiled from Foreign Commerce and Navigation of the United States, 1910-18, and Monthly Summary of Foreign Commerce of the United States, June issues 1919-36.

Conversion factors used: Corn meal, 1 barrel=4 bushels corn; oatmeal, 18 pounds=1 bushel oats; rye flour, 1 barrel=6 bushels rye; malt, 1.1 bushels=1 bushel barley; wheat flour, 1 barrel=4.7 bushels grain 1909-17; 4.5 bushels, 1918 and 1919; 4.6 bushels 1920; 4.7 bushels, 1921-36; apples, 3 boxes=1 barrel. The unit, "1,000 pounds" in the columns of canned goods is presumed to be net weight, according to Government regulations.

¹ Included with condensed and reported in value only prior to 1918-19. Includes cream, fresh, 1918-19 to 1923-24. Beginning 1924-25 reported as milk, sweet and sour, and buttermilk.

² Included in all other articles prior to 1909-10.

³ Reported in value only prior to 1918-19. Figures are imports for consumption, and include corned beef.

⁴ Wet salted over 25 pounds.

⁵ Dry salted over 12 pounds.

⁶ Not separately classified.

⁷ January-June 1924.

⁸ Imports for consumption beginning 1933-34.

⁹ Preliminary.

¹⁰ Bales of 473 pounds net.

¹¹ Includes silk, raw or as reeled from cocoon, silk waste, and silk cocoons. Beginning 1933-34, silk waste excluded.

¹² Reported in value only.

¹³ Beginning Sept. 22, 1922.

1936 ¹	55	101	141	83	81	103	110	102	106	95

¹ These index numbers measure the changes in production of farm products for sale and for consumption in the farm home. Products fed to livestock, used for seed, or in other forms of production are not included. Production of meat animals is a measure of total slaughter including slaughter for farm use, but does not include changes in number of livestock on farms from year to year. The index number of dairy products production represents total milk produced for all purposes except whole milk fed to calves. Calendar-year production of livestock and livestock products is compared with crop production of the same year. Each group index, as well as the total, is obtained by multiplying the yearly quantities by a 1924-29 average price received by producers for each of the commodities, and the sum of these yearly values at average prices, divided by the corresponding average sum for the period 1924-29 taken as 100. The commodities included in constructing the index contributed about 93 percent of the gross income from agricultural production during the years 1924-29. The commodities included in each group are: Grains—wheat, corn, oats, barley, rye, buckwheat, flaxseed, rice, grain sorghum; fruits and vegetables—grapes, apples, apricots, peaches, pears, cranberries, figs, grapefruit, oranges, lemons, olives, potatoes, sweetpotatoes, dry edible beans; truck crops—asparagus, snap beans, beets, cabbage, cantaloupes, carrots, cauliflower, celery, cucumbers, eggplant, lettuce, onions, peas, peppers, spinach, strawberries, tomatoes, watermelons; cotton and cottonseed; all crops include tobacco and hay in addition to all previous items; meat animals—cattle, calves, sheep, lambs, hogs; dairy products—total milk production less milk fed to calves; poultry products—chickens and eggs; all livestock and livestock products include wool in addition to the livestock and livestock products mentioned; the total index is the combined index of all crops and all livestock and livestock products.

¹ Estimated quantities produced, sold, and consumed in farm households times weighted annual prices. Cash income plus value of commodities consumed in farm households equals gross incomes. For feed and seed crops, horses, and mules, value includes sales by farmers in some States eventually bought by farmers in other States. These interfarm sales tend to overestimate the total income from farm production for the country as a whole.

² Weighted average price paid to farmers for crop-marketing season used in evaluating commodities, weighted by usual marketing rates and with allowance for usual departure from weighted average price for marketing season.

³ Includes value of Government purchases in the emergency drought purchase program of cattle and calves: 1934—\$105,606,000, 1935—\$5,941,000; sheep and lambs, 1934—\$7,221,000. Does not include value of Government purchases of goats in 1934 amounting to \$491,000.

⁴ Includes local administrative expenses for corn, wheat, tobacco (Burley, fire-cured, and dark air-cured), sugar beets, sugarcane and sirup, and hogs. Does not include benefit payments for crops in States for which estimates are not published: Rice, 1935—\$2,000; tobacco, 1934—\$24,000, 1935—\$15,000; sugarcane for sugar, 1934—\$865,000, 1935—\$525,000.

⁵ Includes \$39,109,000 cotton price-adjustment payments.

⁶ Preliminary estimate.

¹ Estimated quantities produced, sold, and consumed in farm households times weighted annual prices. Cash income plus value of commodities consumed in farm households equals gross incomes. For feed and seed crops, horses, and mules, value includes sales by farmers in some States eventually bought by farmers in other States. These interfarm sales tend to overestimate the total income from farm production for the country as a whole.

² Includes local administrative expenses for corn, wheat, tobacco (Burley, fire-cured, and dark air-cured), sugar beets, and sugarcane and sirup. Does not include benefit payments for crops in States for which estimates are not published: Rice, 1935—\$2,000; tobacco, 1934—\$24,000, 1935—\$15,000; sugarcane for sugar, 1934—\$865,000, 1935—\$525,000.

³ Includes value of Government purchases in the emergency drought purchase program of cattle and calves: 1934—\$105,606,000, 1935—\$5,941,000; sheep and lambs, 1934—\$7,221,000. Does not include value of Government purchases of goats in 1934 amounting to \$491,000.

⁴ Includes local administrative expenses.

⁵ Includes cotton price adjustment payments totaling \$39,109,000 for the United States.

⁶ Includes sugar beets for other States: Gross income, 1934—\$3,541,000, 1935—\$4,365,000; benefit payments 1934—\$1,996,000, 1935 (estimated)—\$1,167,000.

agement ⁵	986	1,136	1,105	1,150	-243	-874	-1,046	279	782	1,598

¹ Estimates since 1934 have been adjusted to the revised estimates of production which were made after the 1935 census data became available. Estimates of income from 1926-33 have not yet been adjusted to revised production estimates.

² All of the current operating costs except 7.5 percent of fertilizer costs, 9.5 percent of feed, 10 percent of binder twine, 15 percent of ginning costs, and 20 percent of fire-insurance costs which are estimated as paid by nonfarmer landlords.

³ Depreciation of farm buildings and farm equipment is based upon the value of buildings and farm equipment according to the 1919 and 1929 census, the amount spent for replacements on buildings and machinery and price changes for farm machinery and building materials. While the rate of depreciation fluctuates slightly from year to year, during the last 14 years it has averaged about 5 percent of the value of farm buildings and 21 percent of the value of machinery, automobiles, and trucks.

⁴ Cash wages to hired labor plus an allowance of 25 percent for board and an additional 12½ percent of the cash wage to represent perquisites furnished hired labor and domestic hired labor contributing to production. Includes only that portion of interest payable by farm operators, figured at 75 percent of all interest payable on farm-mortgage debt on real estate used in production and interest on all bank loans, other than real estate loans. It is assumed that 70 percent of all taxes on farm property used in production are paid by farm operators and that 72 percent of all rent paid is paid to nonfarmer landlords.

⁵ Allowing a return for labor of the farm operator and unpaid family labor at a wage rate equal to that of hired labor without board.

Bureau of Agricultural Economics.

1934 ¹¹	37,259	7,276	471	424	150	375	397	51	366	442
1935 ¹¹	38,562	8,508	502	446	166	593	440	51	365	400

¹ As of Jan. 1. Includes land, buildings, machinery, and livestock. Estimates are census values for census years. The value of land and buildings for intercensal years is based on the index of land values per acre and a straight-line interpolation of total acreage in farms. Livestock values are annual estimates of the U. S. Department of Agriculture. Value of farm machinery is based on estimated purchases of farm machinery and changes in the prices paid by farmers for farm machinery.

² For more detailed information for the years 1925-34, see table 442. The estimates for 1909-23 are based on items which represent about 95 percent of the gross income in 1924-34.

³ Estimates from 1909-24 based on interpolations between census estimates and the index of farm wage rates: 1924-35 upon farm-wage rate, changes in the number of hired laborers per farm, and the number of farms.

⁴ From 1909 to 1919 interpolation between census years based on an index of prices paid by farmers for feed and an index of production of feed crops. From 1919 to 1935 estimates are based on prices of feed crops, production of byproducts feeds and sales of feed grains and hay which are not used in industry or exported.

⁵ Interpolated between census estimates based on estimated total fertilizer consumption and the U. S. Department of Agriculture index of fertilizer prices paid by farmers.

⁶ Value of farm implements interpolated between the 1909, 1914, and 1919 census value of implements produced, after adjustment to represent retail values. Interpolations for other years are based on factory values of farm implements sold in the United States and raised to retail values. Farmers expenditures for automobiles and trucks are estimated from registrations in principal agricultural States and prices paid by farmers.

⁷ Includes the estimated cost of operating trucks, tractors, and one-half of the cost of operating automobiles. Expenditures per vehicle are based upon changes in the prices of gasoline, kerosene, oil, and tires, licenses, and estimated annual mileage. Cost of operation is estimated cost per vehicle times estimated number of vehicles on farms.

⁸ Annual cotton production multiplied by ginning costs per bale.

⁹ Estimates of taxes are based on a study of real-estate taxes by States. For additional information on taxes paid by farmers see House Document No. 406, The Farmers' Tax Problem.

¹⁰ On mortgage indebtedness as of Jan. 1. Estimates for 1910, 1920, 1925, 1928, 1930, and 1933 based on census data or special farm-mortgage studies. Interpolations for intervening years were made from smooth curve fitted to above mentioned years and from changes in the current value of agricultural capital.

¹¹ Preliminary.

Bureau of Agricultural Economics; tentative estimates of the Bureau.

¹ Unless otherwise stated, these data are revised estimates based on information furnished by farm families to the Bureau of Agricultural Economics adjusted to the trends indicated by the census data of 1920, 1930, and 1935.

² Except for 1910 and 1920, these are estimates by the Bureau of the Census.

³ Census enumerations as of Apr. 15, 1910, Jan. 1, 1920, and Jan. 1, 1935.

⁴ Estimated by the Bureau of the Census.

⁵ Net movement to farms during the year, a reversal of the earlier trend.

⁶ Estimate not available when this book went to press.

Bureau of Agricultural Economics.

¹ Percentages based on census data.

² The sum of the percentages shown for a particular year subtracted from 100 percent will give the percentage of farms ranging from 50 to 174 acres in the State or division.

³ The sum of the percentages shown for a particular year subtracted from 100 percent will give the percentage of tenants ranging from 35 to 54 years of age in the State or division.

Bureau of Agricultural Economics; compiled from reports of Census of Agriculture, Bureau of the Census.

¹ Receipts for 1934 and 1935 include rental and benefit payments received from the Agricultural Adjustment Administration. The sums were roughly divided between crops and livestock. The average amounts were, in 1934 and in 1935, respectively: United States, \$109 and \$123; North Atlantic, \$13 and \$10; East North Central, \$86 and \$81; West North Central \$200 and \$174; South Atlantic, \$66 and \$65; South Central, \$118 and \$141; Western, \$89 and \$186.

² Average of farms for which the item was reported.

³ Minus sign (-) shows decrease.

Bureau of Agricultural Economics. Compiled from reports of individual farms operated by their owners.

Division averages for 1927 and 1928 in 1930 Yearbook, table 510; 1929 and 1930 in 1932 Yearbook, table 459; 1931 and 1932 in 1934 Yearbook, table 464, and for 1933 and 1934 in Agricultural Statistics, 1936, table 446.

¹ Preliminary estimates. States grouped mainly on a basis of production practices and yields. In computing averages, data were weighted by acreage harvested. For some groups of States, the exceptionally high costs largely reflect the drought of 1935, which resulted in relatively low yields on the acreage harvested. Costs per acre harvested were greatly increased because a much higher than normal proportion of the seeded acreage was not harvested because of crop failure.

² Includes threshing for wheat and oats.

³ Includes charges for water for irrigation, twine and sacks, crop insurance, use of implements, use of storage buildings, overhead including a small amount of miscellaneous labor, and a charge for expenses incurred on acreage abandoned and not harvested.

⁴ Includes a charge for rent on the acreage not harvested because of crop failure.

⁵ Includes the 6 New England States, New York, New Jersey, Pennsylvania, Delaware, Maryland, Virginia, West Virginia, Kentucky, and Tennessee.

⁶ Includes the States of North Carolina, South Carolina, Georgia, Florida, Alabama, and Mississippi.

⁷ Includes the States of Arkansas, Louisiana, Oklahoma, and Texas.

⁸ Includes the States of Montana, Idaho, Wyoming, Colorado, New Mexico, Arizona, Utah, Nevada, Washington, Oregon, and California.

⁹ Includes the 6 New England States, New York, New Jersey, Pennsylvania, Delaware, Maryland, Virginia, West Virginia, and Kentucky.

¹⁰ Includes the States of North Carolina, South Carolina, Georgia, Tennessee, Alabama, and Arkansas.

¹¹ Includes the States of Idaho, New Mexico, Arizona, Utah, Nevada, Washington, Oregon, and California.

Bureau of Agricultural Economics.

¹ Preliminary estimates. In computing averages, data were weighted by acreage harvested.² Obtained by dividing the production of lint in terms of 500-pound gross-weight bales by the acreage harvested.³ Includes hauling and spreading manure.⁴ Includes picking and snapping cotton, hauling to gin, and hauling lint and cottonseed to local markets.⁵ Includes miscellaneous labor, irrigation (including water), dusting, picking sacks and sheets, crop insurance, use of implements, use of storage buildings, and overhead.⁶ Includes the lower and upper coastal plain of Virginia, North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana, and the black prairie belt of Alabama and Mississippi.⁷ Includes the rolling and hilly uplands of Virginia, North Carolina, South Carolina, Georgia, and Alabama, which border the Blue Ridge Mountains on the east and south.⁸ Includes Tennessee, exclusive of Lake County, the hilly cotton lands of northern Mississippi, northern Alabama, and northern Georgia, and western North Carolina.⁹ Includes the principal bottom lands of the Mississippi, the Arkansas, and the Red Rivers.¹⁰ Includes the hilly lands of Arkansas, Louisiana, southern Missouri, eastern Texas, and eastern Oklahoma.¹¹ Includes the Gulf coast prairie of Texas and Louisiana, and the black waxy prairie of Texas.¹² Includes the dry-land areas of western Oklahoma, western Texas, and eastern New Mexico.¹³ Includes the irrigated cotton lands of California, Arizona, New Mexico, and Texas.¹⁴ Includes the 16 States of Virginia, North Carolina, South Carolina, Georgia, Florida, Alabama, Tennessee, Mississippi, Louisiana, Arkansas, Missouri, Oklahoma, Texas, New Mexico, Arizona, and California, which produced 99.9 percent of the United States cotton crop of 1935.

Bureau of Agricultural Economics.

¹ 1912-14=100.² Includes food, clothing, household operating expenses, furniture and furnishings, and building materials for house.

Bureau of Agricultural Economics; compiled from prices reported to the Department of Agriculture by retail dealers throughout the United States. The prices used in constructing the above index numbers of prices paid by farmers are for constant quantities and sizes, but are not adjusted for changes in quality. Over a period of years marked changes may occur in the quality of certain commodities. For example, a study by the American Society of Agricultural Engineers indicated an improvement in quality of farm machinery of about 70 percent between 1910-14 and 1932.

The index numbers include only commodities bought by farmers; the commodities being weighted according to purchases reported by actual farmers in farm-management and rural-life studies from 1924 to 1929.

¹ Figures prior to 1935 revised in 1934.

Bureau of Agricultural Economics. Prices of farm products received by farmers collected monthly from a list of about 12,000 special price reporters.

This list is made up almost entirely of country-town dealers, elevator managers, buyers, and merchants. The commodities by groups are as follows: Grains—wheat, corn, oats, barley, rye, rice; cotton and cottonseed; fruits—apples, oranges, lemons (California), grapefruit (Florida), pears; meat animals—cattle, calves, sheep, lambs, hogs; dairy products—milk (wholesale), milk (retail), butter, butterfat; chickens and eggs; miscellaneous—potatoes, sweetpotatoes, tobacco, peanuts, wool, flaxseed, beans (dry edible), hay, horses, and mules; commercial truck crops—tomatoes, lettuce, cantaloups, onions, cabbage, celery, beans (snap), watermelons, asparagus, peas (green), cucumbers, spinach, carrots. These index numbers of commercial truck crops, as constructed, are adjusted for seasonal variation in that the index number for any month is a percentage of the 6 corresponding months in the base period and were not constructed in unadjusted form, nor in the adjusted form prior to January 1924.

Data for 1910-26 in 1935 Yearbook, table 472.

Bureau of Agricultural Economics.

Estimates of annual purchases of foods by a typical workingman's family were obtained from the 1918-19 Cost of Living Survey made by the United States Bureau of Labor Statistics. The 58 foods include meat, dairy and poultry products, bakery and cereal products, a number of fresh and canned fruits and vegetables, and several miscellaneous items.

No allowance is made for processing taxes on wheat, rye, rice, hogs, corn, peanuts, and sugar, which, on the quantities of these products included in annual family purchases, amounted to about \$2 in 1933, \$10 in 1934, and \$11 in 1935.

Retail price data are from the United States Bureau of Labor Statistics; farm price data are principally those estimated by the Bureau of Agricultural Economics.

The index of hourly earnings excludes agricultural workers and is published by the United States Bureau of Labor Statistics. The index for 1936 is based upon earnings in 25 manufacturing industries. The variation in this index is closely associated with variation in the margin series.

¹ Computed by reducing to a 1910-14 base the Bureau of Labor Statistics series, 1926=100; the index numbers for each group on the 1926 base are divided by the monthly averages for 1910-14. The averages used for each group are as follows: Farm products, 71.3; foods, 64.5; hides and leather products, 64.5; textile products, 56.3; fuel and lighting, 52.7; metals and metal products, 85.3; building materials, 55.2; chemicals and drugs, 81.2; house furnishing goods, 54.6; miscellaneous, 110.1; and all commodities, 68.5.

¹ Yearly averages, from 1909 to 1923, are from reports by crop reporters, giving average rates for the year in their localities. From 1924 to date, weighted average of quarterly reports, April (weight 1), July (weight 5), October (weight 5), and January of the following year (weight 1).

² This column has significance only as an essential step in computing the wage index.

³ Calendar years 1910-14=100.

¹ Farm Credit Administration; joint stock land bank loans include loans from joint stock land banks in receivership.

² Association of Life Insurance Presidents. Reports cover operations of 37 companies representing 82 percent of the admitted assets of all legal reserve life companies in the United States.

³ Federal Reserve Board.

⁴ Less than \$27,000.

⁵ Includes \$32,000,000 drought loans.

⁶ Includes \$66,000,000 drought loans.

⁷ Includes \$60,000,000 drought loans.

¹ Farm Credit Administration. Figures for the Federal land banks are rates to borrowers through national farm loan associations. Each Federal land bank district or Federal intermediate credit bank district is given equal weight in computing the respective rates for these 2 types of credit, and the rate for each district is weighted by the number of days in force.

² From 1917 through 1925 data are based on semi-annual averages of the yields on all issues of Federal land bank bonds. Beginning 1926, yields are based on average daily yield on asked prices of long-term issues, excluding bonds callable in 5 years or less.

³ Federal Reserve Board.

⁴ Range.

¹ This table is a supplement to table 475, 1933 Yearbook of Agriculture; to table 484, 1934 Yearbook; to table 484, 1935 Yearbook, and to table 463, 1936 Agricultural Statistics. It includes data from recent studies and other studies not available at the time of publication of the 1933-36 tables.

² The agency that obtained the data was a State university, agricultural college, or agricultural experiment station, and the record or account-book method was used in obtaining the data.

³ Includes expenditures for fuel, light, household supplies and hired help; in some cases includes also those for laundry done outside, telephone, postage, express and freight, insurance on furniture, dry-cleaning and pressing, moving charges, interest on family debts, ice, and water.

⁴ Does not include savings.

⁵ Basis of valuation not given.

⁶ Evaluated at 10 percent of estimated value of house.

⁷ Not given separately.

⁸ Not included in this report.

⁹ Includes personal expenditures.

¹⁰ Automobile only.

¹¹ Life insurance included with other savings.

¹² Evaluated at farm prices.

¹³ Evaluated at retail prices.

¹⁴ Evaluated at estimated rental value of house minus cash expenditures for housing.

¹⁵ Size of family in adult-equivalent units.

¹⁶ Value of fuel furnished included with value of food furnished.

¹⁷ Evaluated at 9 percent of estimated value of house.

¹⁸ Evaluated at 10 percent of estimated value of house plus cash expenditures for housing.

¹ Estimates as of Feb. 1, 1937. Farmers who expected to apply for conditional grants under the agricultural-conservation program for 1936 were required to file work sheets in order to allow bases to be established.

² All soil-depleting crops except cotton, peanuts, and tobacco included.

³ County committees were requested to obtain work sheets for every farm in Illinois, Indiana, Iowa, Michigan, Minnesota, Missouri, Nebraska, Ohio, South Dakota, and Wisconsin.

⁴ General bases established only on farms where diversion from the general base was contemplated in Alabama, Arkansas, Florida, Georgia, Louisiana, Mississippi, and South Carolina.

¹ All activities include 5 private-land projects with a total area of 202,935 acres located in Arizona and New Mexico, which were not reported individually and not accounted for in private-land tables.

² All Emergency Conservation Work work on watershed projects.

³ Gross area as authorized by Division of Conservation Operations.

⁴ Refers to area on which Soil Conservation Service has completed its share of work, with the exception of supervision required to see that the farmer fulfills his agreement.

⁵ Change in classification reduced this figure below last year.

Soil Conservation Service.

¹ Demonstration area figures include 7 subprojects; Emergency Conservation Work camp figures include work outside project areas, only, in connection with Soil Conservation Service.

² Emergency Conservation Work figures refer to total number of camps in State, as reported.

³ Gross area of projects as authorized by Division of Conservation Operations.

⁴ No report received.

⁵ Any decreases shown in figures since last year are the result of official change in interpretation of items.

Soil Conservation Service.

¹ Headquarters of national forests:

Region 1: Federal Building, Missoula, Mont.; embracing Montana, northeastern Washington, northern Idaho, and northwestern South Dakota.

Region 2: Post Office Building, Denver, Colo.; embracing Colorado, eastern Wyoming, South Dakota, Nebraska, and western Oklahoma.

Region 3: Post Office Building, Albuquerque, N. Mex.; embracing Arizona and New Mexico.

Region 4: Forest Service Building, Ogden, Utah; embracing Utah, southern Idaho, western Wyoming, and Nevada.

Region 5: Phelan Building, San Francisco, Calif.; embracing California and southwestern Nevada.

Region 6: Post Office Building, Portland, Oreg.; embracing Washington and Oregon.

Region 7: Victor Building, Washington, D. C.; embracing Kentucky, Maine, New Hampshire, Pennsylvania, Puerto Rico, Vermont, Virginia, and West Virginia.

Region 8: Glenn Building, Atlanta, Ga.; embracing Alabama, Arkansas, Florida, Georgia, Louisiana, Mississippi, North Carolina, eastern Oklahoma, South Carolina, Tennessee, Texas, and portion of Virginia.

Region 9: Federal Building, Milwaukee, Wis.; embracing Illinois, Indiana, Iowa, Michigan, Minnesota, Missouri, North Dakota, Ohio, and Wisconsin.

Region 10: Federal and Territorial Building, Juneau, Alaska; located in Alaska.

² The areas were established by Executive order or by purchase for use by the Forest Service in conducting studies of range management.

Forest Service.

For lists of national monuments and national game refuges, located wholly or in part within national forests, address the Forest Service, Washington, D. C.

¹ Western white pine in Idaho, Montana, and Washington; sugar pine in California and Oregon; northern white pine in other States.

² Includes all sales of southern pines.

³ White fir in California, Idaho, Oregon, and Washington; balsam fir in other States.

⁴ Engelmann spruce in Colorado and Montana; Sitka spruce in California, Oregon, and Washington; eastern spruce in other States.

⁵ Eastern and western hemlock for Eastern and Western States, respectively.

⁶ Western red cedar in Idaho, Oregon, and Washington; northern white cedar in Maine, Wisconsin, Michigan, and Minnesota; incense cedar in California; eastern red cedar in other States.

⁷ Includes aspen.

⁸ Redwood.

⁹ Alder.

¹⁰ Veneer logs.

Forest Service, in cooperation with the Bureau of the Census.

¹ Standing timber of all species of size suitable for lumber, according to the local practice in each region as of 1930.

² Current annual growth of timber of saw-timber size.

³ Cut for lumber and other commodities, averaged for the period 1925-29.

⁴ Saw timber destroyed, averaged for the period 1925-29.

⁵ Destruction due to insects, disease, windfall, etc., averaged for the period 1919-29.

⁶ Includes New York, Pennsylvania, New Jersey, Delaware, and Maryland.

⁷ Includes Ohio, Indiana, Illinois, Iowa, Kansas, Missouri, Nebraska, Tennessee, Kentucky, and West Virginia.

⁸ Includes the coastwise States, Virginia to Texas, inclusive; also Arkansas and Oklahoma.

⁹ Includes Idaho and Montana.

¹⁰ Includes the other Rocky Mountain States and South Dakota (Black Hills).

Forest Service; from a National Plan for American Forestry, 1933.

¹ Season, Apr. 1 to Mar. 31.

² Croppage figures by Bureau of the Census prior to 1923-24 cover only places the annual value of products of which exceeded \$500. Since that date \$5,000 value is the limit.

³ Imports and exports for seasons prior to 1926-27 included wood turpentine and wood rosin.

⁴ Market prices—unweighted for seasons 1900-1901 through 1920-21; weighted for seasons 1921-22 through 1935-36.

⁵ Unit—1 barrel (50 gallons) turpentine and 3 $\frac{1}{2}$ barrels (500 pounds gross each) rosin.

⁶ Prices rounded to nearest 5 cents.

⁷ Trade estimate.

⁸ Bureau of the Census.

⁹ Bureau of Chemistry.

¹⁰ Estimated by J. E. Lockwood.

¹¹ Bureau of the Census and Bureau of Chemistry.

¹² Turpentine and Rosin Producers' Association.

¹³ Bureau of Chemistry and Soils.

Bureau of Chemistry and Soils.

NOTE.—Omissions indicate reliable figures not available.

¹ Includes expenditures on county roads under State control in Delaware, North Carolina, Virginia, and West Virginia.

² In a large number of States equipment costs are charged to construction and maintenance projects, generally through a system of rentals. In these cases only the net debit or credit in the equipment account is shown. The minus (-) sign indicates a deficit.

³ Includes expenditures on park and forest roads where such roads are not on the State highway system.

Bureau of Public Roads.

TABLE 547.—Motor-vehicle registrations and imposts on highway users, 1935, by States, including State motor-vehicle registration fees, etc., State motor-fuel taxes and special State imposts on motor vehicles operated for hire (motor-carrier taxes)

State	Motor-vehicle registrations and fees				Motor-fuel taxes			Motor-carrier taxes, net total receipts of calendar year
	Registered motor vehicles, private and commercial			Net total receipts of calendar year	Tax rate per gallon at end of year	Approximate consumption by motor vehicles	Net total receipts of calendar year	
	Total	Passenger automobiles, taxicabs, and busses	Motor-trucks, tractor trucks, etc.

¹ Except as follows: New Hampshire, Massachusetts, Idaho, and Oklahoma (1924-28), and New York (1932-35), year ended June 30; Rhode Island, year ended Mar. 31; New Jersey, year ended Oct. 31.

² Preliminary.

³ Estimated by State authorities.

⁴ Estimated.

⁵ Agricultural census.

⁶ Based on tag sales.

⁷ Total of 4 companies plus estimates for others.

Bureau of Agricultural Economics; compiled from reports of the National Fertilizer Association, published in the Fertilizer Review; based on fertilizer tag sales or sale records, or estimates, as shown in footnotes.

TABLE 555.—*Fertilizer and fertilizer materials: Production, sales, imports, exports, and consumption, United States, 1930-35*

Item	1930	1931	1932	1933	1934	1935 ¹
Sulphate of ammonia (equivalent of all forms):

Sulphate of potash	86,608	63,663	31,440	60,444	69,200	70,820
Other potash-bearing substances	613	547	393	503	394	272
Total ¹⁰	933,938	528,764	287,931	441,519	449,114	637,789

¹ Preliminary.² Byproduct of coke ovens; production from other sources (coal, gas, bone carbonizing, etc.) is usually less than 5 percent of the total production.³ Includes ammonia liquor NH_3 content converted to sulphate equivalent.⁴ Fertilizer establishments only.⁵ Bulk superphosphate. Superphosphate in base and mixed goods excluded.⁶ Includes kainit, manure salts, sulphate of and muriate of potash.⁷ General imports, 1931-33; imports for consumption, 1934-35.⁸ Originated mostly in Germany.⁹ Originated mostly in France.¹⁰ Total includes 15,445 tons of sulphate of potash-magnesia in 1933; 20,957 tons in 1934, and 25,876 tons in 1935.

Bureau of Agricultural Economics; compiled as follows: Production and sales, sulphate of ammonia and potash from Bureau of Mines; sulphuric acid and superphosphate from Bureau of the Census; imports and exports from Bureau of Foreign and Domestic Commerce.

TABLE 556.—*Nitrogen in inorganic nitrogenous materials: World production, 1931-36*

Product	Quantity produced during year ended June 30					
	1931	1932	1933	1934	1935	1936
Byproduct sulphate of ammonia	395,600	331,800	283,500	337,800	353,700	402,200
Other forms of byproduct nitrogen ¹	34,000	33,000	43,500	53,100	49,600	49,600
Cyanamide	221,000	148,100	185,300	214,800	255,700	297,500
Synthetic sulphate of ammonia	384,000	574,400	616,000	588,200	587,400	694,300
Nitrate of lime	121,600	86,800	130,100	117,900	168,600	171,900
Other forms of synthetic nitrogen ¹	432,500	382,600	508,300	567,000	668,900	793,400
Chilean nitrate of soda	275,000	187,000	77,900	92,700	197,300	211,600
Total	1,863,700	1,743,700	1,844,600	1,971,500	2,281,200	2,620,500

¹ Including nitrogen products used for industrial purposes and ammonia in mixed fertilizers.

Bureau of Chemistry and Soils. Compiled from British Sulphate of Ammonia Federation, Ltd., annual report. Fertilizers are included in this table under the final form as sold, so that, for example, cyanamide if converted into sulphate of ammonia is included under synthetic sulphate of ammonia, or, if into ammoniophos, is included under other synthetic nitrogen.

Exports.....	1,258,139					

¹ Byproduct from the mining of copper, lead, and iron ores. (Bureau of Mines.) The production for sale in the miscellaneous chemical industry, as reported by the census, was 34,352,500 pounds in 1931 and 21,152,574 pounds in 1933, with some plants not reporting.

² Sales by producers. (Bureau of Mines.)

³ Produced for sale (Bureau of the Census.)

⁴ Comparable with 1933; some plants not reporting.

⁵ Copper industry only. (Bureau of Mines.) The production for sale in the miscellaneous chemical industry, as reported by the census, was 60,816,515 pounds in 1931 and 55,949,580 pounds in 1933.

⁶ Nicotine sulphate and other tobacco extracts.

⁷ Classified as sheep dip.

Bureau of Agricultural Economics; production and sales from Bureau of the Census and Bureau of Mines (indicated by footnote); imports and exports from the Bureau of Foreign and Domestic Commerce.

¹ Includes independent local associations, federations, large-scale centralized associations, sales agencies, and independent service-rendering associations, but not including subsidiaries, contact locals, nor associations only renting property.

² Includes members, contract members, shareholders, shippers, consignors, and patrons.

³ Including dry beans and rice.

⁴ In the light of information received subsequent to the original publication of these data, the estimates are being revised.

⁵ Revised to include fully the membership of cooperative livestock sales agencies operating on terminal markets.

Farm Credit Administration.

¹ As here used, an agency is a complete operating unit. Some associations maintain agencies on more than 1 market.

² Includes some animals sold for yard traders.

³ Includes some animals not segregated by kind.

⁴ Includes animals purchased or sold in the country.

Farm Credit Administration.

¹ Data are for bales received of the various crops, rather than for bales sold.

² Running bales.

³ Includes 66,137 bales marketed with the 1922 crop.

⁴ Includes 25,000 bales marketed with the 1923 crop.

⁵ In addition to the cotton handled by the large-scale regional associations a considerable number of bales was handled by the American Cotton Cooperative Association and by the cooperative gins.

1936-37 2-----	150	186	136	154	131	190	142	132	185	140	144	138

1 Beginning 1932-33 alternative rates, depending on loading, were established. To preserve comparability, rate for highest weight to which shippers could load without having cotton compressed at own expense was used in computation of index.

2 Preliminary. Based on rates in effect through Feb. 4, 1937.

Bureau of Agricultural Economics.

These relatives are based on the average of the rates in effect during the crop year. Rates in effect in 1913=100.

¹ Weight as delivered at original shipping point. In the case of freight transported over several different railways, each ton is counted only when transported by the first railway. Some traffic, reshipped under new billing without benefit of transit privileges or proportional rates, may be counted more than once.

² Preliminary.

Bureau of Agricultural Economics; compiled from reports of the Interstate Commerce Commission. Figures for earlier years appear in previous issues of the Yearbook.

¹ "4-H" stands for head, heart, hands, health.² Different boys and girls completing is the sum of the individual boys and girls completing 1 or more projects in contrast to project completions, which is the sum of all the projects completed by all boys and girls.³ Prior to 1930, the work on Child development and parent education was included in Miscellaneous.

Extension Service.

TABLE 573.—Net imports and price per pound of raw silk; and production, net imports, and price per pound of rayon yarn, United States, 1927-36

Calendar year	Raw silk		Rayon yarn			
	Net imports ¹	Average price ²	Production	Net imports ¹	Average price ³	
					150A denier	300A denier
	1,000 lbs.	Dollars	1,000 lbs.	1,000 lbs.	Dollars	Dollars
1927.....	85, 036	5.443	75, 555	17, 740	1.489	1.289
1928.....	87, 172	5.072	97, 230	15, 113	1.500	1.300
1929.....	96, 848	4.993	121, 400	20, 318	1.246	1.073
1930.....	80, 581	3.415	127, 330	6, 009	1.059	.900
1931.....	87, 540	2.401	150, 880	3, 460	.768	.636
1932.....	74, 841	1.561	134, 670	2, 501	.660	.538
1933.....	70, 361	1.612	213, 500	6, 157	.609	.503
1934.....	60, 447	1.298	208, 300	4, 887	.587	.487
1935.....	72, 361	1.633	257, 560	3, 249	.573	.480
1936 ⁴	67, 541	1.766	277, 630	21, 249	.586	.484

¹ Net imports are imports minus reexports; beginning 1934, imports for consumption.² Average of monthly-average prices of Japanese silk double extra 13-15; 78 percent white at New York. Basis for trading on New York Raw Silk Exchange.³ Average of monthly-average prices of domestic yarn, first quality. The count indicates the number of deniers or 1/4-decigram units, in weight, of a standard length of 450 meters. Since the standard is based on an arbitrary fixed length and a variable weight, the finer the yarn the smaller the count; 150-denier count, a size commonly used, is fine and 300-denier count is coarse.⁴ Net exports.⁵ Preliminary.

Bureau of Agricultural Economics.

Compiled as follows:

Net imports from Foreign Commerce and Navigation of the United States.

Prices from bulletins of the U. S. Bureau of Labor Statistics.

Production of rayon yarn from the Textile Organon, a publication of the Textile Economics Bureau, Inc.
